Research and quality

2015-2016 is another pivotal year in advancing the specialty through AAO-HNSF Research and Quality activities 14
A Breakthrough in TMJ Pain Relief

Now you can offer your patients the latest technology in TMJ pain relief. The TMJ NextGeneration™ device is FDA-cleared, safe and effective in reducing TMJ pain.

A New Approach

The TMJ NextGeneration™ device consists of custom ear canal inserts that support the temporomandibular joint and reduce pain. It also provides a “cognitive awareness” to the patient that discourages grinding, clenching and other para-functional behavior.

Patient Outcomes

In a clinical trial, subjects experienced statistically significant pain reduction while using TMJ NextGeneration™ devices. Visual Analog Scale scores showed a 58 percent pain reduction after three months of use. At the end of the trial, 100 percent of subjects reported good to excellent results.*

WARNINGS AND PRECAUTIONS: Do not wear devices while showering, swimming or during contact sports. Fluctuations in body weight may require a refitting. You may experience some discomfort when first using the devices. If discomfort worsens, please remove devices and contact your health care provider. Safety and effectiveness has not been established for people with arthritis, and those who have had jaw injuries or jaw or ear surgery.

Go to tmjnextgen.com for a full list of risks and warnings.

Informal Patient Case Study**

The TMJ NextGeneration™ device supports the jaw joint by preventing the ear canal diameter from collapsing while the jaw opens and closes. This Joint Vibration Analysis (JVA) illustrates the improvement in one patient immediately after insertion.

Toll-free number: 855-303-4601

**This was a single patient study using JVA to measure the before and after effects with TMJ NextGeneration™ devices; individual results may vary.
Certification in Otolaryngology Practice Management

Today, thousands of certification programs exist for personnel in practically every industry. Credentials lead to improved public confidence in the capabilities, competence and mobility of the person holding that certification, and they prove as a daily commitment to continuing education. The Certification in Otolaryngology Practice Management (COPM) credential proves dedication and commitment to the practice through a formal pathway to certification. And with the option to take the exam electronically from any computer, attaining the COPM designation is now more accessible than ever.

Benefits Include:
- Sustaining excellence in lifelong learning in otolaryngology practice management.
- Personal satisfaction and intellectual stimulation.
- Demonstration of commitment to the profession.
- Increased value to patients, physicians and staff.
- Professional development that increases knowledge of all aspects of otolaryngology management.
- Formal recognition of your accomplishment.
- Authority to use the COPM designation.
- A certificate attesting to the achievement.

Set Your Practice Apart in the World of Otolaryngology Practice Management by Encouraging Your Manager to Certify

Visit www.AOAnow.org/COPM to begin your journey today
Ah, the sweet sound of nothing.  
Help your patients find peace and quiet.

Peace and quiet. Not too much to ask for, unless your patient has tinnitus. **Arches Tinnitus Formula™** is safe, effective and affordable, and has been helping individuals with tinnitus for over 12 years. Give your patients the sweet sound of nothing and recommend Arches Tinnitus Formula today.

Get a free CD of clinical studies, physician’s booklet, and patient brochures. Call 800.486.1237 or email md@archesnp.com

Gripers and whiners

A recent “Piece of My Mind” essay by Scott I. Berman, MD, in the April 28 issue of JAMA talked about “gripers and whiners” in medicine. He made the point that “gripping” is common across all professions and occupations: people complain about the difficulty of their work, yet continue in their jobs. “Whiners,” on the other hand, blame others for not being able to do their work. In the case of physicians, whiners blame insurance companies and hospital compliance offices for limiting their ability to take care of patients. He opined that physicians need to stop being “wimps” and take charge of challenging the bureaucracy.

While diligent insistence can resolve many issues, there are increasing constraints on our ability as otolaryngologists to provide what we believe to be the best care for our patients. On the one hand, we are legally obliged to provide the community “standard of care,” as defined by medical experts. But the third-party payers increasingly require more proof than our courts do. They want data, not opinions.

My parents taught me that in any conflict, I should try to see things from the perspective of people with whom I disagree. I have repeatedly found this to be a very effective exercise—helping me to identify solutions. The other day, I applied this approach in thinking about the number of insurance company practices that we otolaryngologists generally regard as flawed or unfair: e.g., denials of payment for procedures or medications that we believe are indicated. To my horror, I kind of see their point. An entity that has X amount of money to cover the healthcare needs of a population has a duty to be certain that the funds are spent responsibly—i.e., payment for proven therapies. Sometimes we cannot provide that proof in a form the analysts can understand. Therein lies the rub!

There are a number of valid and legitimate constraints on the collection of quantitative data for many clinical issues in our field. The randomized trial is accepted as the gold standard for medical research, but it is often impossible to conduct such a study of the problems that we treat. A clinical trial is considered unethical if existing evidence conclusively demonstrates efficacy (think about the infamous Tuskegee experiment). And randomized, blinded clinical trials of surgical procedures are nearly impossible. Moreover, many of our treatment outcomes can be difficult to quantify. For example, blood pressure can be expressed numerically. But nasal obstruction? Not so much. Another, very important issue: problems that are not common enough for one center to amass a critical “n” of cases. The result is that we collectively have a wealth of experience that we cannot “mine” to produce meaningful data about the outcomes of much of our management.

So are we doomed to be “whiners?”

Fortunately, no. Our AAO-HNSF is embarking on a very important initiative: the development of a registry for otolaryngology so that all Members can share their clinical experience in a format that is searchable, analyzable, and de-identified. The project will be extremely valuable for our Members. We can still reserve the right to “gripe” about the system, but the registry will significantly enhance the quality of care that we provide to our patients.
and not a summer lost...
even with ventilation tubes

Please consider **DOC'S PROPLUGS** for all your child's swimming and bathing needs

Registry, coding, and compassion

We continue to make progress on our “Road to a Registry.” This month’s Bulletin features an enlightening article about clinical registries, including the formation and benefits of Qualified Clinical Data Registries (QCDRs) and examples of successful registry operations. This tool will allow our Members to participate on an equal footing with providers across a wide spectrum of diseases as care transitions to a quality-based enterprise. I am grateful for the continued, tireless work on this project by the Registry Task Force, chaired by Lisa E. Ishii, MD, MHS, and our staff, led by Jean Brereton, MBA, and Cathlin Bowman, MBA. We will present a Miniseminar on registry selection and implementation following the Opening Ceremony at 10 am Sunday, September 27, at our 2015 Annual Meeting in Dallas this year.

We have more news. In the complete review of our educational offerings, including the Annual Meeting, we reviewed format, pricing, and educational content. Our goal is to provide an excellent, broad-based content in a format conducive to flexible learning opportunities. Coding and practice management instruction is a consistently requested area for additional educational content. We felt a well-designed, comprehensive portfolio of offerings relating to ICD-10 and CPT coding and practice management resources, delivered in a variety of settings, would be of great benefit to our Members. The Academy Health Policy staff and Physician Payment Policy (3P) Workgroup undertook a comprehensive assessment of services and vendors. We are pleased to announce a collaborative partnership for an Academy-sponsored Coding and Practice Management Workshop at this year’s Annual Meeting.

We welcome our new partner, AAPC, and will team with them to present in-person meetings and state-of-the-art online educational opportunities. Specifically, we will highlight ICD-10 webinars and in-person events leading up to the October 1, 2015, transition from ICD-9. Practice management resources, including compliance planning strategies, will be integral to these workshops. We have participated in successful joint ventures with AAPC and Rhonda Buckholtz, CPC, CENTC, with coder certification. We anticipate a noticeable upgrade to our Annual Meeting with the addition of this workshop.

Applying skills where needed

In the wake of the earthquake in Nepal, I would like to acknowledge and thank all of our Members who participate in humanitarian efforts and outreach internationally and within the United States. Humanitarian work is not only disaster relief, but a wide range of services to improve medical care or education that benefit underserved populations. Opportunities for service abroad include surgical missions, visits to teach newer surgical technologies (e.g., endoscopic sinus surgery), or research efforts to understand the scope of ENT diseases in developing countries. Some Academy Members have found retirement as a time to shift their focus to volunteer work, starting foundations, relocating to become the sole otolaryngologist in a region, or helping to train new otolaryngologists abroad. In the United States, they may volunteer through a free clinic, head and neck cancer screenings at a health fair, visits to a Native American reservation, or offer financial or moral support to residents and other otolaryngologists who do humanitarian work. Residency is an optimal time to participate in humanitarian mission trips domesticaly and especially abroad. Such service can hopefully set a pattern for future service and can be a tremendous learning and teaching experience. Every year the AAO-HNSF disburses as many as 15 grants ($1,000 each) to help U.S. residents and fellows-in-training deliver care to those who need it most around the world. These grants are made possible through the generous support of our membership and the Academy’s commitment to the humanitarian spirit of our specialty.

Finally, I would like to commend the participants in this year’s CORE Grant Program for making 2015 the 30th consecutive year that such grants have been awarded. Participants from the American Academy of Facial Plastic and Reconstructive Surgery, AAO-HNSF, American Head & Neck Society, American Rhinologic Society, and American Society of Pediatric Otolaryngology reviewed 163 applications requesting $2.5 million in research funding. The 2015 CORE leadership (including the boards and councils of all participating societies) has approved 35 grants totaling $519,000. In an effort to keep costs down, the participating societies agreed to increase applications to be reviewed by each reviewer from six to nine. This resulted in 33 percent fewer reviewers participating in the 2015 CORE Study Section and an estimated $25,000 savings to participating societies. I would like to thank all of the societies that continue to participate in this worthwhile endeavor for their efforts in supporting research in otolaryngology and our staff, led by Stephanie L. Jones. ©
As Meaningful Use changes, we’re advocating for you

As Members know, the Health Policy team has actively worked not only to educate Members on the Centers for Medicare & Medicaid’s (CMS) Electronic Health Records (EHR) Meaningful Use (MU) Incentive Program, but also to advocate on behalf of Members so that your needs and experiences are best represented within the program.

This past spring, CMS published two proposed rules regarding the EHR MU Incentive Program that if finalized will change a number of reporting requirements in the current year and beyond. Below is a brief overview of changes under each proposed rule.

**Stage 3 proposed rule overview**
- Proposed Stage 3 as the final stage of MU.
- Proposed single reporting period and a single stage for all participants.
- Proposed requiring a full calendar year reporting period after 2015 for all eligible professionals regardless of their stage of participation.
- Proposed replacing the core and menu structure with a flat structure (eight advanced use objectives with accompanying measure requirements).

**Modified Stage 1 and Stage 2 proposed rule overview**
- Proposed changes for reporting in 2015, 2016, and 2017 in an effort to align with Stage 3.
- Proposed synchronizing reporting period objectives/measures to reduce burdens on providers.
- Proposed all providers (EPs, hospitals, CAHs) would be moved to a calendar year reporting period starting in 2015.
- Proposed all providers attest to a single set of objectives and measures in 2015.
- Proposed reducing the number of requirements and lowering certain thresholds.
- Proposed all providers move to Stage 3 beginning in 2018 regardless of their prior participation or stage of MU.

**Academy submits comments to CMS**
The Academy submitted comments to CMS emphasizing 1) the need for increased flexibility; 2) lack of interoperability; 3) stringent thresholds; and 4) delay of stage 3. Publication of final rules likely will take place this summer and the Academy will once again submit

### State Trackers, take a bow

With most state legislatures adjourned for the year, the AAO-HNS sincerely thanks its State Trackers who helped make 2015 another successful year. Despite their full workloads and family obligations, these physician leaders took action and volunteered their time to closely monitor and report on legislative activity in their statehouses.

The efforts of the AAO-HNS State Trackers cannot be praised enough, as this legislative session was quite active. Many states considered legislation to inappropriately expand the scope of practice of various professions, including audiologists, speech-language pathologists, naturopaths, and hearing aid dispensers. With the dedication of the State Trackers, quick and coordinated actions were successful in keeping the most intrusive of these measures from being enacted.

Check the adjoining chart to identify your state's tracker(s). If you are interested in joining this “boots on the ground” effort, please contact the AAO-HNS Legislative Advocacy team at govtaffairs@entnet.org for more information.
2015 AAO-HNS Election results

The AAO-HNS extends its greatest appreciation to the candidates of the 2015 Election for their dedication and willingness to serve. The Nominating Committee presented the membership with an outstanding slate of candidates. The AAO-HNS thanks the committee for its meaningful deliberation. Committee members are: Richard W. Waguespack, MD (Chair), Ellen S. Deutsch, MD, Stacey L. Ishman, MD, MPH, Albert L. Merati, MD, Brian A. Moore, MD, Brian Nussenbaum, MD, Shannon P. Pryor, MD, Lawrence M. Simon, MD, Wendy B. Stern, MD, and Ken Yanagisawa, MD.

The results are:

President-Elect: Gregory W. Randolph, MD
Director-at-Large (Academic): Timothy L. Smith, MD, MPH
Director-at-Large (Private Practice): Seth R. Schwartz, MD, MPH

The results are:

C. Denneny III, MD, AAO-HNS/F EVP and CEO, and Susan D. McCammon, MD, Chair of the Ethics Committee, serve as ex-officio members of the committee without vote.

*Please note that the information listed is based on proposed rules, which may change.*

BOARD OF GOVERNORS

How to be a more effective medical board member

David R. Edelstein, MD, Manhattan Otolaryngology-Head and Neck Surgery, Chair-elect. Board of Governors

Comments on behalf of Members. To stay up-to-date on the latest announcements from CMS, Members are encouraged to periodically review the Academy’s CMS Quality Initiative Page at: [www.entnet.org/content/cms-quality](http://www.entnet.org/content/cms-quality).

*Please note that the information listed is based on proposed rules, which may change.*

The expansion of fellowship training and the modern-day resident

In 1994, Byron Bailey, MD, and Robert H. Miller, MD, MBS, examined the explosion in the amount of otolaryngology subspecialty programs and number of fellowship trainees. By 1994, 25 percent of the 260 otolaryngology residents were entering fellowship. Fast forward 20 years and subspecialty pursuits among otolaryngology trainees have only expanded further. Greater than 50 percent of the approximately 300 graduating otolaryngologists are deciding to pursue subspecialty fellowship, and in the most recent unpublished data from the 2014 AAO-HNS SRF survey, 61 percent of all residents stated that they planned to pursue fellowship. Currently the most popular fellowships are pediatric otolaryngology, facial plastic surgery, and head and neck oncology. This compares similarly to 1994. The only major shifts are the increase in the number applying to pediatric otolaryngology and a relative decrease in the proportion of applicants applying to neurotology. Both are perhaps greatly affected by the number of available positions. There were 27 neurotology programs in 1994 compared to only nine to 12 programs [requirement having tightened for subcertification] participating now (varies by year). On the converse, pediatric otolaryngology now has 31 programs participating compared to only 16 in 1994.

The reason for the spike in interest in subspecialty training is likely multifactorial and not altogether clear. In 1994, Dr. Bailey postulated that the likely motives behind why residents decide to pursue subspecialty training are to 1) gain additional experience to provide superior care; 2) reach a sense of mastery in a subspecialty field; 3) limit their practice to an area they find more satisfying; 4) obtain a marketing advantage over colleagues who practice more broadly; and 5) obtain job security.

In 2015, these motives likely still largely hold true, but are there new factors that are driving this overall increase in fellowship interest? In the 2014 AAO-HNS SRF survey (approximately 460 respondents), residents were asked “What is the most important factor in determining which fellowship you decide to pursue?” The most common responses were types of surgical cases (50 percent), nature of clinical and medical problems (33 percent), and lifestyle (6 percent). However, this survey gave residents limited choices and may not have captured the true responder attitudes. In this same survey, 46 percent of respondents identified location as the most important factor in determining their practice choice. Practice location is clearly important to the majority and there is a distinct possibility that market forces in certain geographical locations may play a role in the decision-making. Residents may find that fellowship helps them to gain a niche or occupational advantage in certain competitive or saturated areas.
WIO: role models, trail blazers

Christine B. Franzese, MD, EVMS
Otolaryngology, Virginia Beach, VA

Take advantage of the extraordinary networking and mentoring opportunities at this year’s WIO activities at the Annual Meeting. Learn about the incredible activities and career trajectories of some of our most respected leaders and interact in person.

There are those who used to ask “what’s a nice girl like you doing in a profession like this?” That’s how the essay of one of the four women otolaryngologists featured in the book Being a Women Surgeon: Sixty Women Share Their Stories begins. Among the esteemed authors are our own Sujana S. Chandrasekhar, MD, Marion E. Couch, MD, PhD, MBA, Cherie-Ann Nathan, MD, and Kathleen Yaremchuk, MD, MSA.

These four accomplished women contributed heartfelt stories from their lives and experiences. Some are amusing and comical, some shocking or disturbing, some frustratingly sad, but all of them inspiring. These contributions describe the challenges and experiences from residency, from academics, and from private practice, that each of these women, faced and still face. Each independently describes the unfortunate lack of female role models, particularly female otolaryngology leadership role models.

So what are these nice girls doing in a profession like this? To paraphrase one, these girls are blazing trails, getting up when they’ve fallen, teaching themselves and others to be better, wearing blinders when needed, and taking them off to fight for what’s right when called for. I boldly add: You are also serving as role models. My sincerest thanks to each of you fiercely brilliant ladies for filling that void.

To continue this momentum, the WIO general assembly will be held in a new time slot at the Annual Meeting on Monday, 28, from 7:30-9:30 am. This year we break tradition having a panel rather than a speaker. The topic will be “Do We Still Need General Otolaryngologists?” Please join us for a lively and exciting debate.
The Academy needs you! Fill out a RUC survey

The Academy needs experts three times a year to fill out RUC surveys for the AMA Specialty Society/Relative Value Update Committee. The RUC is a joint effort of the American Medical Association and medical specialty societies that makes recommendations on revising and updating the resource-based relative value scale (RBRVS), which is utilized by Medicare and many private payers to determine reimbursement for medical services. Information, such as the time and intensity it takes to perform certain services for patients, is derived by surveying physicians. During July the Academy must survey the family of CPT codes 31570-31579 (Flexible Laryngoscopy, with three new codes) for October RUC meeting presentation.

Filling out a survey takes about 20 minutes. Before completing a survey, please review important background information by viewing the slide set developed by the AMA RUC at www.entnet.org/AMA_RUC_slides. Background on the RUC survey process and instrument can be found at www.entnet.org/RUC-Surveys. Email Jenna Minton mintonhealthcarestrategies@gmail.com to participate.

Mission brings cleft lip/palate procedures to Peru

Little Yosely poses with Myriam Loyo, MD, just before going home. Yosely, who had palate surgery the previous day, was among 58 patients in Chicalayo, Peru, treated by a 28-member team including Dr. Loyo, plastic facial and reconstructive surgery fellow from Oregon Health & Science University.

COTTON-FITTON ENDOWED LECTURE IN PEDIATRIC OTOLARYNGOLOGY

The Cotton-Fitton Endowed Lecture in Pediatric Otolaryngology, funded by Robin T. Cotton, MD, and Cynthia M. Fittori, was established to educate otolaryngologists about considerations and care of children with disease or disorders of the ears, nose, throat, head, and neck.

“Pediatric Otolaryngology: The Value Proposition of Subspecialty Training”

Lecturer: Marci Lesperance, MD

Marci Lesperance, MD, is professor of otolaryngology-head and neck surgery and division chief of pediatric otolaryngology at the University of Michigan Health System. She has a passion for otolaryngology and for seeing research advances translated into patient care. As a clinician-scientist, Dr. Lesperance has been gratified to see the opportunities brought about by the growth of the field. Advances in the surgical and medical care for children, including the growth of neonatal ICUs and survival of once-fatal childhood illnesses, have contributed to the growth of pediatric otolaryngology.

Dr. Lesperance was educated at the University of Michigan (receiving an MD and MS), where she did a six-year otolaryngology residency, with 18 months of research training supported by a T32 grant. She then completed a one-year research fellowship in the Laboratory of Medical Genetics at the National Institute of Deafness and Other Communication Disorders (NIDCD), followed by a pediatric otolaryngology fellowship at Children’s National Medical Center in Washington, DC.

Dr. Lesperance’s research focuses on the molecular genetics of hearing loss and using genetics to improve patient care. She recently served as Chair of the Board of Scientific Counselors for the NIDCD. She has held leadership roles in the American Society of Pediatric Otolaryngology, most recently as president. She edited the Pediatric Otolaryngology section for Cummings Otolaryngology-Head and Neck Surgery, 6th edition.

H. BRYAN NEEL III MD, PHD

DISTINGUISHED RESEARCH LECTURE

"Leading the Biomedical Revolution in Precision Health: How Stanford Medicine Is Developing the Next Generation of Health Care"

Lecturer: Lloyd B. Minor, MD

Lloyd B. Minor, MD, scientist, surgeon, and academic leader, may be best known for identifying and coming up with a surgical correction for a disabling ear disorder called “superior canal dehiscence syndrome.”

He is the Carl and Elizabeth Naumann Dean of the Stanford University School of Medicine, a position he has held since December 1, 2012. He is also a professor of otolaryngology-head and neck surgery and a professor of bioengineering and of neurobiology, by courtesy, at Stanford University. As Dean, Dr. Minor is leading the Campaign for Stanford Medicine, which seeks to sponsor innovation, transform patient care, and empower future leaders at the school.

Beyond that, he challenges the U.S. healthcare system for comprehensive reforms to correct two systemic problems: very high costs, but not commensurate great results. He says it will require a team approach to both lower the cost of care and improve outcomes. He predicts technology will be a major part of the correction.

Dr. Minor earned his bachelor’s and medical degrees from Brown University, and trained at Duke University and the University of Chicago medical centers. Before moving to Stanford, he was provost in The Johns Hopkins University School of Medicine.

He has been honored for his research, and in 2012, was elected to the prestigious Institute of Medicine of the National Academy of Sciences.
JOHN CONLEY, MD
Lecture on Medical Ethics

The John Conley, MD Lecture on Medical Ethics was established in 1987. This lecture is dedicated to the subject of ethics and is presented during the Opening Ceremony.

“What Makes a Great Surgeon?”
Lecturer: G. Scott Morris, MD, MDiv

G. Scott Morris, MD, is a physician (board certified family practice), an ordained United Methodist minister (St. John’s United Methodist Church in Memphis), and the founder of a clinic (Church Health Center) that serves 65,000 people with primarily volunteer physicians and other healthcare providers.

After earning an undergraduate degree at the University of Virginia, a Master of Divinity from Yale University, and an MD from Emory University, he chose to move to Memphis because it was one of the country’s poorest cities.

Since 1987, Dr. Morris has seen the Church Health Center grow to serve poor and/or underinsured patients, and has expanded to inspire more patients with a “wellness” component, which offers spiritual support along with exercise, diet, and cooking classes. He has written two books on the topic: Relief for the Body, Renewal for the Soul, and Healthcare You Can Live With, and writes a monthly column in the Memphis Commercial Appeal.

In his column, Dr. Morris gently presses for everyone, including doctors, to “be in the moment” and to connect with full attention to others. But he also presses for changes in medical practices, including helping patients to a “better death” than being hooked up to machines in their last moments.

HOWARD P. HOUSE, MD MEMORIAL LECTURE FOR ADVANCES IN OTOLogy

The Howard P. House, MD Memorial Lecture for Advances in Otology honors a member who has had a distinguished career in advancing hearing science through research and education to improve quality of life.

“Modern Otology: A Nexus of Surgery, Neuroscience, and Biotechnology”
Lecturer: Konstantina M. Stankovic, MD, PhD

Scientists have known for 60 years that there is a battery-like power in the inner ear of mammals. But it took a team led by Konstantina Stankovic, MD, PhD, and scientists from MIT to figure out how to access that battery and begin assessing its potential.

Her own long-term goal, she says, is “to restore hearing through regeneration and novel technologies.” She began her research in hearing as an undergraduate student and has maintained a focus in this area since.

Dr. Stankovic is a neurotologic surgeon at Massachusetts General Hospital and an associate professor of otology and laryngology at Harvard Medical School. She trained at MIT (PhD) and Harvard (MD, residency in otolaryngology–head and neck surgery, followed by a postdoctoral research fellowship through the Howard Hughes Medical Institute (HHMI), a clinical fellowship in neurotology.

She has received numerous awards, including the Association of MIT Alumni award for the highest degree of academic excellence and professional promise, the Henry Asbury Christian Award for outstanding performance in research and scholarly activities at Harvard Medical School, HHHI postdoctoral research fellowship, the Burt Evans young investigator award from the National Organization for Hearing Research, and Harvard/MIT Thomas A. McMahon Mentoring Award.

EUGENE N. MYERS, MD INTERNATIONAL LECTURE ON HEAD AND NECK CANCER

Established in 1991, the Eugene N. Myers, MD International Lecture on Head and Neck Cancer was endowed by Leslie Nicholas, MD, in honor of his nephew, Eugene N. Myers, MD, FRCS Edin (Hon), a past president of the AAO-HNS/F.

“Care and Rehabilitation of Patients Treated for Advanced Laryngeal Cancer”
Lecturer: Professor-Emeritus Frans J.M. Hilgers, MD, PhD

Dr. Hilgers is a member of several national and international ENT societies. He holds the honorary medal of both the Netherlands Society of Oto-Rhino-Laryngology and Cervico-Facial Surgery, and the Dutch Head and Neck Society.
Research and quality
by Lisa E. Ishii, MD, MHS

The Foundation’s 2015/2016 strategic plan outlines several major initiatives that reside in the Research and Quality (R & Q) business unit. It is an exciting time for R & Q, as these interrelated initiatives will provide valuable new quality tools for our Members. This issue of the Bulletin contains several articles about these initiatives, and, additionally, I have outlined other efforts in Research and Quality that are being conducted on behalf of our Members.

The AAO-HNS/F Boards approved funding for the development of a clinical data registry for the specialty at the March meeting. Clinical data registries are organized systems of data collection, storage, and dissemination that serve multiple purposes to societies. They are becoming increasingly important as the primary tool for quality reporting. However, they can also offer a central repository for otolaryngology-specific data, which can serve a multitude of needs for our membership. Dr. Denneny has written about the importance of this initiative for the future of the specialty. As described in the article on registries in this issue, we have a task force working through the planning phases now (See "Registry 101," page 16.)

Last year the AAO-HNSF Board approved the incorporation of quality measures into the work plan of the business unit. This required building an infrastructure to support work on measures development, stewardship, and endorsement activities. The work on measures development and stewardship of existing otolaryngology measures continues. Much of the effort this year was focused on updating our existing measures for adult sinusitis, acute otitis externa, and otitis media with effusion. Measures in government programs are routinely reviewed for updates related to new evidence and based on utilization and performance rates for the measures within the PQRS program. The Performance Measures Task Force, chaired by Richard M. Rosenfeld, MD, MPH, is working toward a prioritization of measure topics for the specialty for new measures/measures groups. Now that we are through the majority of the activities related to updating our current measures, staff will be working with physician leaders and volunteers to begin development of new measures for our specialty. Measure groups, as opposed to individual measures, are important resources for our Members that allow for highly efficient quality reporting.

Again this year a successful Centralized Otolaryngology Research Efforts (CORE) meeting was held in March in Dallas. The 2015 CORE leadership (including the boards and councils of all participating societies) approved a portfolio of 35 grants totaling $519,000. Please review the list of grantees in this issue. We very much appreciate the leadership of the physician leaders associated with the 2014 CORE Study Section subcommittees: Christine G. Gourin, MD (head and neck surgery), David R. Friedland, MD, PhD (current neurotology section leader), Oliver Adunka, MD (incoming neurotology section leader), and Rodney J. Schlosser, MD (general otolaryngology section leader).

In addition, through the Guidelines Task Force and physician leadership of Seth R. Schwartz, MD, MPH, and Dr. Rosenfeld, and the many members who volunteer to serve on panels as their society representatives, great work continues on clinical practice guidelines (CPGs) and clinical consensus statements (CCS). We now have a compendium of 13 published CPGs; four CPGs currently under development/update; four guideline topics in the queue for future development (two new and two updates); and four published CCS and one under development. The AAO-HNSF guidelines process has evolved over the past eight years and our process is recognized as best practice by leading organizations including the Institute of Medicine and the Agency for Healthcare Research and Quality. With the ever-increasing emphasis on quality in practice, it certainly reflects well on our specialty that we have such a wide array of guidelines and consensus statements. The guidelines will inform our performance measures and our registry as our R & Q efforts come full circle.

I invite you to take the time to learn about these exciting initiatives that will help us provide the highest value care to our patients.
Patient registries are organized systems for patient data collection. Often developed and maintained by specialty societies, they can serve a number of purposes, with data collected for scientific, policy, or clinical reasons. The value of mature clinical data registries has been proved by multiple peer groups, including the Society for Thoracic Surgeons (STS) and the American College of Cardiology (ACC), both of whom have maintained registries since the 1980s. As the value of registries has become more obvious, more and more specialty societies are in various stages of planning and developing registries of their own.

Patients included in a registry typically have a similar disease condition or have undergone the same type of procedure. The type of registry developed depends on the ultimate purpose, with different infrastructure and support dependent on registry type. For example, Quality Improvement (QI) registries differ from those designed primarily for research purposes, or those for post-market surveillance.

The most important step in building a registry is identifying its purpose such that it aligns with member needs and expectations. The Registry Task Force (RTF), chaired by Lisa E. Ishii, MD, MHS, and including the Performance Measures Task Force Chair, Richard M. Rosenfeld, MD, MPH, as well as James C. Denney III, MD, David L. Witsell, MD, MHS, Robert R. Lorenz, MD MBA, Jennifer J. Shin, MD, SM, Rodney P. Lusk, MD, and David R. Nielsen, MD, is charting the course forward for the AAO-HNSF. In collaboration with the consultant Avalere Health and Academy staff, the RTF will identify the core purpose and scope of the Registry.

How are registries used?
Being aware of the different ways in which registries are used is important.

Research
- To generate evidence; evaluate the method or outcomes of treatment provided
- To conduct comparative effectiveness research (CER)
- To identify practice trends

Quality improvement
- To analyze the data provided to improve individual or group provider performance
- To report measurement data for national quality programs
- To develop quality measures
- To assess gaps in patient care or provider performance
- To report quality data for pay for reporting/pay-for-performance initiatives

Policy
- To make coverage decisions
- To determine reimbursement rates
- To monitor public health development and post-market surveillance
- To understand and address burden of disease

Surveillance/public health
- To understand patient markets
- To inform coverage determinations and benefit design decisions
- To track prevalence trends

Who uses registry data?
Different healthcare stakeholders use registry data for a variety of purposes.

Providers use registries to:
- Inform treatment decisions
- Report quality measures and participate in Value-Based Payment (VBP) programs
- Improve quality of care via enhanced surveillance and population management

Payers use registries to:
- Understand patient markets
- Inform coverage determinations and benefit design decisions
- Track prevalence trends

Registries provide patient benefits by helping:
- Provide clinical knowledge for complex diseases
- Identify optimal interventions or population-specific care
- Assess therapy outcomes and side effects
Industries use registries to:
- demonstrate the value of its products
- conduct post-market surveillance
- generate Comparative Effectiveness Research (CER)

One of the major types of registries now emerging with the advent of quality reporting for Medicare quality programs is a QCDR or Qualified Clinical Data Registry. These registries are used to report to the Physician Quality Reporting System, or PQRS, and are built to help members report on approved measures for CMS quality reporting. Over time these registries may grow and add new performance measures, but their core deliverable is quality reporting. A good number of societies have developed their QCDRs jointly with their boards as collaborators and partners so that physicians may one-stop shop for quality reporting. Maintenance of Certification Part IV points, and quality improvement. QCDRs house performance measures approved by CMS for PQRS reporting. Until 2019 and for a good period of time thereafter, QCDRs will have a role to play both for PQRS until it is phased out and then in the new CMS Merit Based Incentive Payment Systems (MIPS) as it launches. However, the environment bears watching as physicians who join alternative payment programs will be exempt from quality reporting in 2019.

Walking hand-in hand with QCDRs are PQRS-approved performance measures as they are necessary for quality reporting inside a QCDR. Measures are also important to other types of registries as well as the new payment models.

Here, inside the AAO-HNSF, staff is working closely with the RTF to identify the purpose of the AAO-HNSF registry. At the same time, staff is also working closely with the Performance Measures Task Force to assure the creation of measures for submission to CMS for PQRS, use in the AAO-HNSF registry, and use in alternative payment models.

Right now the AAO-HNSF is in the planning phase of registry development, or Phase 1.

The AAO-HNSF Boards approved funding for the registry in March. The RTF is currently working through Phase 1 activities to plan for the best registry solution for our specialty and to have a registry vendor chosen by the end of September 2015.

As we continue to work through these steps in the planning phase, we will continue to keep you informed through the Bulletin, the News, and other targeted communications throughout the process.

Phases of registry development

- **PHASE 1** Planning Phase
- **PHASE 2** Building Phase
- **PHASE 3** Implementation and evaluation
- **PHASE 4** Maintenance and enhancement
Working together on performance
Quality metrics and performance measures have assumed center stage as payment progresses forward to alignment with quality of care and efficiency in care. To address Member needs for clinical quality measures, the AAO-HNSF launched the Performance Measures Task Force (PMTF) comprised of Richard M. Rosenfeld, MD, MPH, Chair, and Lisa E. Ishii, MD, MHS, James C. Denneny, MD, Richard V. Smith, MD, Jane T. Dillon, MD, MBA, Julie L. Goldman, MD, and David R. Nielsen, MD, in 2014. The Task Force held its first meeting in February 2015. Specific outcomes included a commitment to develop two prioritized sets of measures based on clinical practice guidelines (CPG), a continued collaboration with the AMA-convened Physician Consortium for Performance Improvement® (AMA-PCPI®) for measures testing, and exploration of tools that will facilitate faster development of measures from CPGs. Over the past year, the Foundation has produced a measures development strategy aligned with its registry initiative and new payment models to meet critical Member needs in the realm of quality reporting and support of Medicare and commercial reimbursement with an overarching goal of reinforcing the value of care provided by Members.

The AAO-HNSF is moving forward for Members on three fronts in the realm of clinical quality measures. First, the Foundation took over ownership and stewardship of the AMA-PCPI® measures most applicable to our Members, which include acute otitis externa (AOE), adult sinusitis, and otitis media with effusion (OME) in December 2014. Each of the measures had time-limited endorsement from the government contractor for measure endorsement, the National Quality Forum (NQF). One of the key roles of measure owners and stewards is ensuring the continued validity and endorsement, as well as dissemination and use of the clinical quality measures in its portfolio. To this end, the acute otitis externa (AOE) and otitis media with effusion (OME) measure groups are under consideration in NQF for continued endorsement under their Head, Eyes, Ears, Nose, and Throat (HEENT) measures initiative. This particular NQF project seeks to identify and endorse clinical quality measures for accountability and quality improvement that address these structures. The NQF Committee overseeing this project has two Academy Member appointees, Kathleen Yaremchuk, MD, MSA, and Michael G. Stewart, MD, MPH. Dr. Rosenfeld will provide his expertise in responding to any questions from the panel during the AOE and OME measures review.

Much work has been done behind the scenes to prepare the measures applications, identify all uses of the measures since their initial endorsement, gather all research on gaps in care these address, and all testing and reporting data for submission to NQF for review. During May and June conference calls were held with the NQF HEENT Committee overseeing this initiative. The process concluded with a formal presentation of the measures by the AAO-HNSF to NQF in June.

As the AOE and OME measures were prepared for NQF endorsement, the Foundation launched its own review of the adult sinusitis measures. This review of the measure specifications highlighted several issues that may have impacted Members’ quality reporting in 2014. Staff worked closely with the Centers for Medicare & Medicaid Services (CMS) executive leadership and with the Physician Quality Reporting System (PQRS) vendors to assure correct reporting for Academy Members in 2014 and 2015. Complete revisions to these measures will be in place for 2016 reporting as well. These measures are now under Academy ownership and stewardship, which will allow for continued utilization in the PQRS program and for broad dissemination to assure use.

The Foundation’s work on the second front in clinical quality measures centers on its work to assure that an adequate pipeline of measures is available for Maintenance of Certification (MOC) by otolaryngologists and other physicians for quality improvement and quality reporting purposes. This is where the registry will play a critical role. With a registry, the Foundation will be able to utilize EHR data as well as claims data to craft quality metrics quickly for inclusion in quality reporting programs such as PQRS, Meaningful Use, and the Value-Based Modifier. Concurrently, it is also critically important that the AAO-HNSF disseminate its current measures as broadly as possible to improve patient care and outcomes. To this end, the Foundation has secured inclusion in PQRS of the adult sinusitis and acute otitis externa measures and measure groups. Academy staff has also researched every measure available in PQRS that might have applicability to Member practices and has organized all of these measures and related information on the AAO-HNS/F website at www.entnet.org/content/quality-measures.

The third domain of measure activity focuses on staying abreast of changes to federal rules and regulations in the realm of quality reporting. At this point, it is worthwhile to share just what is happening with your Foundation measures for quality reporting in 2015. This is where measures have a profound impact.
Do you report to PQRS as an individual or as a group?

You may report through the PQRSwizard® made available through the Academy, an EHR, or a registry. You may report either as an individual or as a group. This is an important decision to make early.

Reporting as an individual

If you decide to report individually, you may report using measure groups. If you choose this option, you must report on one measures group on a 20-patient sample, a majority of which (at least 11 out of 20) must be Medicare Part B patients. If you choose to create your own list of measures from the table below, you will have to select nine measures covering three quality domains and report for at least 50 percent of your Medicare Part B patients.

Reporting as a group

If you choose to report as a group, you must first register with CMS. Then, you will identify nine measures from the individual measures list below that cross at least three quality domains.

2015 National Quality Strategy Domains (Individual/Claims Measures)

</table>
You will report for at least 50 percent of your group’s Medicare Part B patient population. For more information on group reporting, visit www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/PQRS/Registry-Reporting.html.

The good news is the Academy has made the process of measure selection easier by having identified all the measures that could be used by Academy Members and sorted them by quality domain for ease of use. The measures highlighted in red were developed and stewarded by the Academy. To secure information on all of the individual measures contained in the table at right, visit www.entnet.org/content/individual-quality-measures.

It is clear with the passage of H.R. 2 Medicare Access and CHIP Reauthorization Act of 2015, the need for quality measures will continue well into the future. The Academy recognizes the complexity and difficulty of the CMS quality reporting and hence, the decision to invest resources into quality measurement development specific to our specialty.

**Reporting as individuals**

For physicians reporting as individuals, you may use these clinical quality measures groups or the other measures groups listed on our web site at www.entnet.org/content/quality-measures-groups.

**AAO-HNS FOUNDATION-SPONSORED CODING AND PRACTICE MANAGEMENT WORKSHOPS AND WEBINARS**

AAO-HNSF is proud to partner with AAPC, a leader in medical coding education, to offer a series of live workshops, webinars, and eCourses. AAPC is the nation’s largest training and credentialing organization for medical coding, billing, auditing, and compliance — with two decades of experience in training and credentialing more than 130,000 professionals.

**The First Live Workshop Will Take Place at the 2015 Annual Meeting & OTO EXPO℠ in Dallas, Texas**

**Friday, September 25 and Saturday, September 26**

This workshop will provide you with new ICD-10 information — a requirement that goes into effect October 1, 2015!

**JOIN US FOR:**
- Business Improvements for Otolaryngology Practices
- Coding for Otolaryngology Practices
- ICD-10-CM for Otolaryngology

**ARRIVE EARLY!**

**Registration is Now Open!**

Supporting the

CORE grants foster research, career development

The Centralized Otolaryngology Research Efforts (CORE) grants program plays a critical role in advancing the field of otolaryngology by providing support to research projects, research training, and career development. CORE aims to: (1) unify the research application and review process for the specialty; (2) encourage young investigators to pursue research in otolaryngology; and (3) serve as an interim step that may ultimately channel efforts for important NIH-funding opportunities.

The CORE grant program has awarded more than $10 million since the program’s inception in 1985. In conjunction with the American Academy of Otolaryngology—Head and Neck Surgery Foundation (AAO-HNSF), societies, foundations, and sponsors are involved in funding one- to two-year non-renewable grants ranging from $5,000 to $70,000. The leadership of each participating society is ultimately responsible for determining who is selected to receive funding each year. The scores and critiques provided by the CORE Study Section are simply recommendations to help in the decision process. The recipients of the grants sponsored by the Alcon Foundation, Cook Medical, and the Oticon Foundation are determined by the AAO-HNSF leadership.

This year the CORE Study Section reviewed 163 applications requesting $2.5 million in research funding.

The 2014 CORE Study Section subcommittees included Head and Neck Surgery, chaired by Christine G. Gourin, MD; Otolaryngology, chaired by David R. Friedland, MD, PhD, and Oliver F. Adunka, MD (chair-elect); and General Otolaryngology, chaired by Rodney J. Schlosser, MD.

We would like to thank Dr. Gourin for her contributions to CORE and welcome Cherie-Ann O. Nathan, MD, as the new chair for Head and Neck starting with the 2016 grant cycle.

The 2015 CORE leadership (including the boards and councils of all participating societies) has approved a portfolio of 35 grants totaling $519,000.

Congratulations to the 2015 CORE grantees

To receive the first section packet on time, registration with payment must be RECEIVED by August 5, 2015. Registration closes September 9, 2015. A $200 registration penalty will be applied to all registrations after September 9, 2015.
Apply to be a 2016 G-I-N Scholar
Up to Five Travel Grants ($1,500 each) Available
Apply by December 1, 2015
Residents are not eligible to apply. Previous G-I-N or Cochrane Scholar recipients may apply if three years have passed and all of their prior obligations were met. Applicants must be members of the AAO-HNS.

Questions? Contact Lorraine Nnacheta
lnnacheta@entnet.org or 703-535-3751

AAO-HNSF Guidelines International Network (G-I-N) Scholars Program
G-I-N Scholars, selected based on their qualifications, experience, interest and engagement in clinical practice guideline development, receive travel grants to attend training and educational sessions at the G-I-N North America meeting. In exchange for receiving a G-I-N travel grant, recipients agree to serve on an upcoming AAO-HNSF clinical practice guideline panel. Recipients will serve as either a panel member or as assistant chair if he or she has prior guideline experience. Recipients are also expected to submit a commentary to Otolaryngology – Head and Neck Surgery on any aspect of guidelines (e.g. development, dissemination, adaptation, implementation, etc.).
Residents are not eligible to apply. Previous G-I-N or Cochrane Scholar recipients may apply if three years have passed and all of their prior obligations were met. Applicants must be members of the AAO-HNS.

Questions? Contact Lorraine Nnacheta
lnnacheta@entnet.org or 703-535-3751

The AAO-HNS/F leadership and SAGE, publisher of Otolaryngology–Head and Neck Surgery, have identified a need to train otolaryngologists in the conduct and publication of systematic literature reviews. Systematic reviews have a high citation impact, and serve as the foundation for evidence-based practice guidelines, clinical performance measures, and maintenance of specialty certification.

Two travel grants of up to $4,000 will be offered for the 2016 Colloquium in Seoul, South Korea, October 21-25, 2016. The Colloquium features a full scientific program and nearly 60 training and discussion workshops related to systematic review. In return for a travel grant to attend the meeting, grant recipients must agree to initiate and submit a systematic review to Otolaryngology–Head and Neck Surgery for publication consideration within 12 months (by October 25, 2017).

Attendees will be introduced to the Cochrane Collaboration, the world leader in evidence summaries of healthcare interventions, and will learn state-of-the-art techniques for producing systematic reviews and meta-analyses.

University of Wisconsin Hospitals and Clinics’ Division of Otolaryngology - Head and Neck Surgery is a leader in teaching, research, patient care and service, and is seeking applicants for one-year clinical fellowships. The ideal candidate should have a strong interest in an academic career in Otolaryngology-Head and Neck Surgery and must demonstrate a commitment to resident and medical student education. Opportunities for both clinical and basic science research are available in the Department of Surgery and through collaboration within the School of Medicine and Public Health. The fellowships will offer a competitive salary with benefits.

**Fellowship Descriptions:**

**Head & Neck Oncology and Microvascular Reconstructive Surgery** ~ This fellowship will stress multidisciplinary management of head and neck malignancies with a primary clinical experience focused on oncologic resection and microvascular reconstruction. The fellow will also gain experience with transoral laser resection, robotic procedures, transnasal endoscopic resection, and anterior skull base surgery. The experience will offer both mentored and independent clinical responsibilities and protected research time.

**Laryngology** ~ This position provides a unique opportunity to interact with adult and pediatric Otolaryngologists, speech pathologists and voice researchers in a clinically active, high flow-through, multidisciplinary setting for treatment of voice, swallowing and airway disorders. Clinical experience will be comprehensive and include office evaluation, office-based procedures, and operative interventions. The applicant will learn surgical techniques for the treatment of benign and malignant vocal folds lesions, surgical and non-surgical management for neurologic, psychogenic and inflammatory disorders, swallowing dysfunction and airway stenosis. Training in video stroboscopy, high-speed video, Voice analysis, QOL, transnasal esophagoscopy, EMG, High Resolution manometry. Research participation and initiation are expected.

Applicants who will have completed a US or Canadian Otolaryngology residency should contact:

**Delight Hensler**  
Division Otolaryngology Head & Neck Surgery  
K4/719 CSC  
600 Highland Avenue  
Madison, WI 53792-7375

**Otolaryngology – Head & Neck Surgery**

**Senior Head and Neck and/or Microvascular Reconstructive Surgeon**

The Department of Otolaryngology – Head and Neck Surgery, at the University of Arizona (UA), College of Medicine (COM) in Tucson, Arizona is seeking a fellowship-trained, board-certified head and neck and/or microvascular reconstructive surgeon to serve in a leadership role at the Associate Professor/Professor level.

The Department has rapidly grown to offer the full breadth of quaternary Otolaryngology – Head and Neck Surgery. Currently, the department consists of 9 clinical faculty and 3 basic science faculty. We have been continuously funded by the NIH and have steadily expanded our residency and fellowship programs.

Funds are available for program building and preference will be given to candidates with funded research backgrounds and/or the ability to recruit funded research programs to the department. Potential senior leadership roles within the department and institution are available for qualified candidates.

Join us during this exciting period of growth. The University COM has recently merged with Banner Health, a $6 billion organization with a hospital network that encompasses all of Arizona, and parts of Colorado and Alaska. There is a tremendous opportunity to establish a state-wide academic program. The University of Arizona and Banner University Medical Center (BUMC) are located in Tucson, Arizona. The Arizona Cancer Center, an NCI designated comprehensive cancer center, is on the BUMC campus as a fully integrated program offering state-of-the-art cancer treatment and research.

The department is seeking an individual who is able to work with diverse students and colleagues, and who has experience with a variety of teaching methods and curricular perspectives. The UA is an EEO/AA Employer.

Apply online at [www.uacareertrack.com](http://www.uacareertrack.com); Job posting 58293.

For additional inquiry, please email and attach a CV to:
Alexander Chiu, M.D., Professor and Chair

**Chief, Otolaryngology**

**OPPORTUNITY IN SOUTH FLORIDA**

Memorial Healthcare System is seeking a Chief for the Division of Otolaryngology. The Memorial Physician Group currently employs two otolaryngologists supporting an established otolaryngology outpatient practice, inpatient hospital consults and emergency room call.

Successful candidates will meet the following criteria:
- Fellowship trained in head and neck surgery
- Minimum of five (5) years leadership experience
- Board certified in otolaryngology
- Experienced in evidence-based medicine
- Excellent communication, interpersonal and team-leadership skills
- Demonstrated success in new program development and the establishment of policies and guidelines to monitor patient progress, evidence-based clinical outcomes and the effectiveness of medical care

This is a full-time employed position with the multi-specialty Memorial Physician Group. The position offers a highly competitive and desirable compensation/benefits package that is commensurate with training, experience and market demand. Professional malpractice and medical liability are covered under sovereign immunity.

**ABOUT MEMORIAL HEALTHCARE SYSTEM**

Memorial Healthcare System is the third-largest public healthcare system in the country. It is a national leader in quality care and patient satisfaction and has been ranked on *Modern Healthcare* magazine’s list of Best Places to Work in Healthcare. Memorial Healthcare System’s facilities include Memorial Regional Hospital, Memorial Regional Hospital South, Joe DiMaggio Children’s Hospital, Memorial Hospital West, Memorial Hospital Miramar, Memorial Hospital Pembroke and Memorial Manor nursing home. Our facilities are located throughout South Florida, a region known for its high quality of life. In addition, Florida has no state income tax. For more information, visit mhs.net.

Washington University in St. Louis
SCHOOL OF MEDICINE

Full Time Academic Faculty Position Available

PEDIATRIC OTOLARYNGOLOGIST
The Department of Otolaryngology-Head and Neck Surgery is seeking a fellowship trained pediatric otolaryngologist. Applicants must be board certified in Otolaryngology. The Division of Pediatric Otolaryngology provides otolaryngology services at St. Louis Children’s Hospital and our new ambulatory Children’s Specialty Care Center just 10 miles west of St. Louis Children’s Hospital opening June 1, 2015. Clinical responsibilities will include inpatient and outpatient responsibilities within the Department of Otolaryngology at St. Louis Children’s Hospital. Clinical program highlights include the Cochlear Implant Program which is one of the two largest in the country. U.S. News and World Report named St. Louis Children’s Hospital to its Honor Roll of America’s Best Children’s Hospitals and recognized by U.S. News for seven consecutive years. Applicants are invited to send their curriculum vitae to: Keiko Hirose, M.D., Chief of Pediatric Otolaryngology, Washington University School of Medicine, 660 S. Euclid, Box 8115, St. Louis, MO 63110, Phone: 314-454-4033, Fax: 314-454-2174, hirosek@ent.wustl.edu.

Washington University is an affirmative action and equal opportunity employer.

Assistant, Associate or Full Professor of Comprehensive Otolaryngology Division
Stanford University School of Medicine Department of Otolaryngology-Head and Neck Surgery

The Division of Comprehensive Otolaryngology in the Department of Otolaryngology-Head and Neck Surgery at Stanford University School of Medicine seeks a board-certified Otolaryngologist to join the department as an Assistant Professor, Associate Professor or Full Professor in either the Medical Center Line or the Clinician Educator Line. Faculty rank will be determined by the qualifications and experience of the successful candidate.

The predominant criteria for appointment for faculty in the Medical Center Line shall be excellence in the overall mix of clinical care, clinical teaching, scholarly activity that advances clinical medicine and institutional service appropriate to the programmatic need the individual is expected to fulfill. The major criteria for appointment for faculty in the Clinician Educator Line shall be excellence in clinical care and clinical teaching.

The successful applicant should be board eligible or board certified in Otolaryngology-Head and Neck Surgery. We expect the successful candidate to develop an active clinical practice in general otolaryngology, be an active teacher of medical students and residents, oversee the clinical program, and (for MCL) maintain an excellent clinical and/or translational research program.

Qualified applicants, based on merit and experience, will also be considered for the position of division chief. The successful applicant will have proven leadership and research potential, as well as sound clinical judgment and surgical expertise.

Stanford University is an equal opportunity employer and is committed to increasing the diversity of its faculty. It welcomes nominations of and applications from women, members of minority groups, protected veterans and individuals with disabilities, as well as from others who would bring additional dimensions to the university’s research, teaching and clinical missions.

Submissions will be reviewed beginning March 3, 2015 and accepted until position is filled.

Submit curriculum vitae, letter of inquiry and the names and addresses of three references to:

EMA Otolaryngology™ simplifies ICD-10 coding, naturally.

Modernizing Medicine's Electronic Medical Assistant®, EMA Otolaryngology™ – a cloud-based and mobile EMR system – was born ready for ICD-10. With EMA's otolaryngology-specific knowledge, structured data and 3D anatomical atlas, efficient, accurate coding is easy. No guesswork. No translations. Just simple, automated ICD-10 coding generated with the exam note and populated onto the superbill. Tap. Touch. Done.

See how easy ICD-10 can be. Learn more | www.modmed.com/icd-10
