systems manage medical malpractice risk
WE ARE REDEFINING THE WAY DOCTORS AND INTEGRATED DELIVERY SYSTEMS MANAGE MEDICAL MALPRACTICE RISK

Our revolutionary approach is seamless and cost-effective. As the nation’s largest physician-owned medical malpractice insurer and an innovator in creating solutions for organizations like yours, we have the resources and experience to meet your unique needs. We’re already providing medical malpractice insurance to a range of integrated delivery system models across the country—supporting thousands of physicians.

We relentlessly defend, protect, and reward the practice of good medicine.

ENTNET.ORG/BULLETIN  AAO-HNS BULLETIN  JULY 2016
NEW FOR 2016!

“Home Study Course Online” Available Now

Residents and practicing physicians will benefit from the flexibility and convenience of accessing the Home Study Course online. Enhanced features make this essential learning tool better than ever!

PRINT VERSION REGISTRATION IS AVAILABLE UNTIL AUGUST 1, 2016

Available through www.AcademyU.org, your otolaryngology education source.

- Use on desktop, laptop, tablet, and mobile phone
- Read online, download to a computer, or print as a PDF
- Search within the articles in each section
- Bookmark key articles and link to complementary resources
- Save money with new purchasing options and discounts
- Take advantage of no subscription deadlines, single yearly exam deadline, and no late fees
- Access immediate exam scores and course completion transcripts
- Subscribe to the entire series or buy each section individually

Register by August 1, 2016

Learning leadership

Leadership is one of those popular buzzwords these days. When most of us applied to medical school and residency, we were thinking about the medical and surgical work at hand and not really about becoming leaders. But as we proceeded in residency and in practice, we learned and honed leadership skills, even if we did not put that name on them.

As surgeons, we are trained to make immediate decisions. We are highly focused with little room for mistakes. This requires managerial skills in the application of knowledge and experience. Leadership, on the other hand, relies on synthesizing disparate information, trying to understand different stakeholders and their concerns, and taking the time to formulate a higher level plan of action. This is true in any leadership position, whether for organized medicine, at a university, or in a practice, and it requires training.

The Academy offered leadership courses years ago, well before it became de rigueur. I took them, like a mountain climber, “because they were there.” They enabled me to learn a new set of skills to face upcoming challenges, allowed me to meet otolaryngologists outside of my specialty area, and think of a future as more than a practicing ENT. Although not formally so identified, participating in the Board of Governors, first as just an attendee, then, as a committee Member and specialty society rep, was an incredible leadership development experience.

As President-Elect of the AAO-HNS/F, I had the opportunity to attend the American Society of Association Executives two-day intensive training in 2014. That gave me some great ideas and showed me how much more I needed to learn if I wanted to serve our membership the best way I could. I applied for the Heller School Leadership Program for Health Policy and Management, held at Brandeis University, with a scholarship co-sponsored by the Academy and the American College of Surgeons. I was fortunate to get in and spend a full week there in June 2015. At that time, my kids were in grades 4, 10, and 11, and one was a college freshman. My husband held down the fort admirably, so that I could spend that week away. Trying to squeeze in the course material through e-learning or fitting it in a weekend here and there would have minimized my ability to focus and understand. The Heller course took some of my ideas and helped crystallize them into actionable items, both for the Academy and for my work.

As President, I have to process a great deal of information every day, from what seems like every direction. This includes communications at least once daily with our EVP/CEO James C. Denneny III, MD, as well as communications with other staff, Members, other medical societies, and federal regulatory bodies. Taking a bead, listening—really listening—to figuring out what the situation is, trying to dissect it, and then figuring how to address the concern as best as possible—these are skills that are necessary for this position. Obviously, I had some of these skills already. However, the fine-tuning of my responses and the ability to step back and see much more of the whole picture than I could previously reflects a great deal on the formal leadership programs in which I have had the good fortune to participate.

Over the past couple of years, I have been asked to speak on leadership, my journey, and negotiation. Using the information learned at leadership courses has made me better able to articulate my feelings and concerns, as well as look for paths that I or others might wish to take on our journeys forward. Great leaders set out not to be leaders but to make a difference. They are not born leaders; they are made. It is clear that, like anything, there is no magic or easy path. Pursuing leadership, like pursuing otolaryngology, requires dedication, commitment, and energy, as well as family support.

We are all facing a rapidly changing healthcare environment. Physician leadership is critical to managing these changes, and leadership development is critical in the progress of our careers. I am exceedingly pleased that our Academy will be launching a formal, long-lasting leadership development program in 2017. The Women in Otolaryngology Section program is providing a template, and the inclusion of otolaryngologists from all backgrounds will make this a robust course that enables individuals to recognize their own leadership potential. I urge you each to take advantage of the wonderful opportunities for growth that this program offers, and I look forward to hearing about each of your leadership journeys in the future.

The growing season

Research and quality-related activities are a high priority and will be even more critical for our Members and their patients in the upcoming years. A significant portion of our budget is dedicated to basic and clinical research as well as quality-related projects. The 2016 Centralized Otolaryngology Research Efforts (CORE) leadership (including the boards and councils of all participating societies) has approved a portfolio of 29 grants totaling $495,195. CORE has been in existence since 1985. The Outcomes Research Evidence-Based Medicine (OREBM) Committee is completing a MarketScan obstructive sleep apnea (OSA) project that will compare single-level sleep surgery versus multi-level sleep surgery. Through their quarterly Bulletin feature, “Publications that may change your practice,” the committee informs our Members of key recent evidence-based studies that might change practice patterns. The Creating Healthcare Excellence through Education and Research (CHEER) network has completed two guideline gaps projects: Sudden Hearing Loss (funded through AAO-HNSF) and Tympanostomy Tubes (funded through AAO-HNS/F). The opportunity for clinical and patient outcomes research will expand as RegentSM, our clinical data registry, begins accepting participants early this fall following a successful pilot. The preliminary rule released by the Centers for Medicare & Medicaid Services (CMS) on April 27, 2016, enforces acceptance of both QCDRs and Clinical Data Registries as mainstays in the Merit-based Incentive Payment System (MIPS) at all levels. For those interested in the Physician Quality Reporting System (PQRS) reporting for 2016, it is essential that you enroll in RegentSM as soon as possible. Please contact us at Regent@ENTnet.org. You will also be able to view live demonstrations of Regent’s functionality and observe the practice dashboard available to all participants.

More exciting developments
A number of factors have contributed to recent discussions centered on multiple aspects of Graduate Medical Education (GME), including future funding issues, effectiveness, and workforce projections. The Accreditation Council for Graduate Medical Education (ACGME) held hearings on the 80-hour work week and accepted testimony on areas of success and concern. The American College of Surgeons (ACS) recently held a National Invitational Conference on the “Future of Surgical Training.” This was attended by the house of surgical specialties, and while some nuances specific to each specialty were identified, there were many common concepts identified, including the future use of simulation technology. The Academy has had an active Simulation Task Force for several years that was recently converted to an education committee chaired by Ellen S. Deutsch, MD. At this year’s Annual Meeting & OTO EXPOSM there will be a simulation reception demonstration. If you wish to participate, please submit your project through the Annual Meeting website.

I recently heard Manny Dominguez, PhD, at digitalNow (a summit for association leaders), describe the virtual hospital he created for the Veterans Health Administration. The graphics and interactive capability of the avatars were incredible. The potential of this technology in surgical training, patient training and education, skills assessment, and population management is truly exciting. Programs such as this will also enhance the capability of telemedicine and telehealth activities, which will become particularly beneficial as we face potential physician shortages and access problems predicted for the near future.

I attended a recent FDA hearing on hearing aids and sound amplifying devices, which included over-the-counter availability of these products and concerns about the ability of patients to properly use and maximally benefit from these devices without a comprehensive aural rehabilitation. Instructional products of the quality demonstrated by Dr. Dominguez could be a powerful adjunct for patients should those sales be allowed. These could be produced by hearing professionals and the industry with such quality that patients would benefit significantly.

Physician-astronaut keynote
I am very excited about this year’s Annual Meeting Opening Ceremony in San Diego. We have engaged a dynamic speaker, Mae Jemison, MD, a physician-entrepreneur-astronaut who conducted research aboard the Space Shuttle Endeavor. She currently leads the 100 Year Starship (100YSS), an initiative seed-funded by DOD’s Defense Advanced Research Projects Agency (DARPA), to assure the capability for human interstellar space travel to another star is possible within the next 100 years. Her inspirational and futuristic comments will be a must for meeting attendees. Don’t miss her amazing presentation!
Ah, summer! There is everything to love about summer: warm weather, long days, vacations, and baseball. This month, top-notch major league baseball players will convene for the mid-season All-Star game in beautiful San Diego, CA. So what does it mean to be an “all-star?” Simply, it means to be the best.

Otolaryngologists know what it means to be the best. We have worked and trained hard, and we constantly seek to improve our knowledge and skills. We want to be the best for our patients and our profession. Part of doing our best for patients is being their voice when important legislative decisions are being made that will affect their healthcare. As physicians, we can step up to the plate and advocate on our patients’ behalf. Fortunately, the AAO-HNS makes advocacy easy, including a new program to recognize the all-stars of advocacy. At the Leadership Forum & BOG Spring Meeting, the “All-Star Advocate” initiative was rolled out, and I hope every eligible Academy Member will join this exciting program. It’s easy, just email govtaffairs@entnet.org.

There are four components to being an All-Star Advocate:
• Sign up to receive The ENT Advocate e-newsletter
• Agree to be a PROJECT 535 “key contact”
• Sign up for an In-district Grassroots Outreach (I-GO) activity
• Donate to ENT PAC*

The ENT Advocate
The ENT Advocate is a monthly email. It is designed to be easy to read and to keep recipients informed of the status of important legislative and political issues affecting otolaryngology and medicine. Most of us get a lot of emails, but this one is concise and packed with valuable information.

PROJECT 535
PROJECT 535, a BOG-sponsored initiative, links an otolaryngologist to each member of Congress (hence the “535”), so that when important legislation arises, the Academy can call upon the PROJECT 535 participants and know that every member of Congress has heard our message.

In-District Grassroots Outreach
Signing up for an I-GO event allows AAO-HNS Legislative Advocacy staff to facilitate contact between you and your legislators in your home district. The local activity can take many forms, tailored to your situation (e.g., one-on-one meeting, visit to your practice). An I-GO activity is a great opportunity to establish yourself as a resource for your members of Congress, so that when you need to advocate, they will already know you—and you do not have to travel to Capitol Hill in Washington, DC!

Academy imaging advocacy update
In May 2016, Academy leaders held a call with leaders from the Society of University Otolaryngologists-Head and Neck Surgeons (SUO), Association of Academic Departments of Otolaryngology-Head and Neck Surgery (AADO), and Otolaryngology Program Directors Organization (OPDO) to discuss residency imaging education in response to payer concerns that non-radiology specialists, including otolaryngologist-head and neck surgeons, are performing imaging services without the proper training. The Academy and SUO/AADO/OPDO agreed that a survey of current residency imaging education practices and active review of diagnostic radiologic studies would be helpful information to provide to private payers in response to their concerns.

This call was a culmination of efforts that began in the fall of 2015, when the Imaging Committee Chair, R. Christopher Miyamoto, MD, initiated outreach to SUO/AADO/OPDO leaders to request collaboration on how best to advocate for services that fall within the scope of otolaryngology-head and neck surgery and how to provide information to private payers that would reflect that residents are trained to perform and interpret diagnostic radiologic studies of the head and neck, sinus, and temporal bone.

Along with resident education efforts, the Academy has also been working to address nationwide imaging service coverage issues with several private payers through intra-society coalition efforts to ensure that otolaryngologist-head and neck surgeons with International Accreditation Committee (IAC) accreditation continue to receive proper reimbursement for the professional and technical component of CT procedures.

Beginning in May 2015, Dr. Miyamoto and Gavin Setzen, MD, past imaging committee...
ENT PAC

Last, but certainly not least, is donating to ENT PAC.* The PAC is non-partisan and issue-driven, so it doesn’t matter which political party you identify with. The monies are used to support candidates who represent our specialty’s interests. Please note that while the amount donated is important, it is also important to have as many otolaryngologists donate as possible. Our message on Capitol Hill is much stronger if we can proudly state that the majority of our Members donate to the PAC.

Send an email to govtaffairs@entnet.org today. The all-stars of baseball will be in San Diego, CA, in July; but look out, San Diego, the All-Stars of ENT are headed your way in September! I look forward to seeing you there, proudly wearing your All-Star Advocate ribbon.

*Contributions to ENT PAC are not deductible as charitable contributions for federal income tax purposes. Contributions are voluntary, and all members of the American Academy of Otolaryngology — Head and Neck Surgery have the right to refuse to contribute without reprisal. Federal law prohibits ENT PAC from accepting contributions from foreign nationals. By law, if your contributions are made using a personal check or credit card, ENT PAC may use your contribution only to support candidates in federal elections. All corporate contributions to ENT PAC will be used for educational and administrative fees of AAO-HNS, and other activities permissible under federal law. Federal law requires ENT PAC to use its best efforts to collect and report the name, mailing address, occupation, and the name of the employer of individuals whose contributions exceed $200 in a calendar year. ENT PAC is a program of the AAO-HNS, which is exempt from the federal income tax under section 501(c)(6) of the Internal Revenue Code.

Addressing private payer denials

The Health Policy Team collaborates with the Academy’s Physician Payment Policy Workgroup (3P) to address and monitor national practice management issues and private payer denials. Nevertheless, there are challenges at the state/local level that require a more focused approach. During the AAO-HNS/F 2016 Leadership Forum & BOG Spring Meeting, Robert Lorenz, MD, MBA, 3P co-chair and coordinator for Practice Affairs, and Lawrence M. Simon, MD, vice-chair BOG Socioeconomic Grassroots Committee and 3P member, provided helpful steps to take when facing insurance coverage challenges:

1. Avoid denials by properly coding and providing suitable documentation, which includes the correct use of modifiers to break bundling edits.
2. Differentiate between pre-certification and pre-determination.
3. Be familiar with certain private payer idiosyncrasies.
4. Develop a relationship with the Medical Directors and explain your practice patterns.
5. If faced with a denial:
   a. Ask for detailed rationale on the policy;
   b. Verify the initial denial and subsequently collect the necessary information;
   c. Request a peer-to-peer review of denial; and
   d. Keep your BOG regional representative apprised of the issue/outcome.

Lastly, the Health Policy Team developed a Private Payer Toolkit to assist Academy Members when working with Medical Directors to address localized denials. The toolkit can be found on the Private Payer Advocacy Academy page at www.entnet.org/content/private-payer-advocacy and includes:
- Template appeal letters
- Advocacy statements
- Position Statements
- Clinical Indicators
- CPT for ENTs

Chair, and Health Policy staff led a coalition effort with the IAC and American Association of Oral and Maxillofacial Surgeons (AOMS) to develop additional strategy in advocacy efforts with private payers. This effort resulted in the development of a Joint Statement on Point-of-Care Imaging, specifically imaging performed with cone beam computed tomography (CBCT) technology, as a form of patient-centered care that provides patients with timely, effective, and patient-centered diagnostic imaging studies.

The Academy provided the Joint Statement to Humana, as part of the advocacy effort to request a change in their policy to allow for appropriate coverage of imaging services. In March 2016, the Academy and IAC leadership held a call with representatives from Humana and their utilization management company, HealthHelp, to discuss ongoing concerns regarding their policy that denies reimbursement of interpretation of imaging services to otolaryngologist-head and neck surgeons. While Humana did not change their policy, the Academy will continue working to advocate for appropriate policies. Once the survey results from the program directors are collected, the Academy plans to submit the analysis of the results to Humana and we believe this should address their concerns regarding adequate training. Updates will be provided to Members via the Bulletin and other communications as they become available.

To learn more about this advocacy effort as well as other private payer advocacy efforts visit entnet.org/content/private-payer-advocacy.
Ten complete inaugural Leadership Course

On a February 2016 evening video conference call, a group of 10 diverse female otolaryngologists completed the first Women in Otolaryngology (WIO) Section Leadership Course. Selected from a highly competitive application process, the group began the inaugural course created by Mona M. Abaza, MD, MS, and Carol R. Bradford, MD. Initiated with a generous grant from Medtronic, the course was modeled after the Association of American Medical Colleges (AAMC) female faculty development courses and the Executive Leadership in Academic Medicine (ELAM) Program at Drexel University. The intent was to help mentor and foster developing women leaders in the AAO-HNS.

The course was launched at the March 2015 AAO-HNS/F Leadership Forum, starting with an all-day face-to-face workshop that evaluated participants’ Myers-Briggs personality types as they related to their leadership styles, and proceeded with the participants attending many leadership talks during the forum. Thereafter, the group met virtually, on a monthly basis, to explore a variety of skills. Participants tackled many of the complicated facets of leadership throughout the year, including conflict management styles and handling difficult conversations, identifying personal traits that can aid/hinder leadership styles, and gaining knowledge of various negotiation skills and types. At last fall’s Annual Meeting in Dallas, we had the opportunity to meet with leaders of the WIO Section and further develop their group bond and networking skills.

Throughout the year, participants worked on capstone projects, both individually and as pairs or in groups. The format also provided a structure for peer-to-peer coaching. These projects had a positive impact for the AAO-HNS and Members’ regional areas. Several of the participants played a significant role in the mENTor Connect project and rollout. Other projects included development and promotion of local otolaryngology groups, the initiation of diversity and inclusion plans for residents, and the launch of a new female resident recognition award by the WIO Section.

The group also had significant advancement in their service roles to the Academy. Several members of the group recently have been appointed/elected to leadership positions within the AAO-HNS. This includes the member-at-large for the WIO Section, the Board of Governors chair-elect, Young Physicians Section chair-elect, and the WIO Research and Survey Committee chair, to name a few. Also, Nikhila P. Raol, MD, MPH, was presented with the Holt Leadership Award for Residents and Fellows-in-Training at the 2015 Annual Meeting. All of the participants have played active roles within the AAO-HNS this year and hopefully will continue to expand their roles in the Academy and in their local communities in the future.

Based on the feedback received, the group indicated they most valued the mentorship and networking experience provided by the course. One participant remarked that she would have never had the courage to ask for what she needed to support her career without the skills and backing of the group leaders and participants.
Mission to Ecuador repairs facial burns, cleft lips, and palates

Jeffrey Markey, MD  AAO-HNSF Resident Humanitarian Grantee

I doubt my reasons for participating in a humanitarian mission were unique: satisfaction in helping others, love of travel, the interesting pathology, learning new viewpoints and techniques. Nonetheless I traveled to Bahia de Caraquez in coastal Ecuador for a week to perform cleft lip and palate repairs. Once you arrive, it doesn’t matter why you came but rather that you’re there, ready to work.

I traveled with ReSurge International, a reconstructive non-profit operating on three continents. Ten other volunteers joined us as we took the six-hour bus ride to Bahia de Caraquez, an impoverished town on shallow muddy waters, after starting in Guayaquil, the capital city of the Ecuadorian province of Guayas. Upon arrival we found ourselves in the concrete, three-story, colorfully painted Miguel H. Alcivar Hospital. The patients were outside waiting for the bus to arrive. We had our work cut out for us.

The week began without delay. The group immediately divided the tasks ahead, and I set off helping to evaluate the patients slated for the OR the following day. I met a boy, younger than a year, with a bilateral cleft lip and barely able to feed. Another older boy had undergone repair years prior and suffered profound speech and swallowing troubles due to a foreshortened and scarred soft palate. Others awaiting surgery had facial burn injuries, syndactyly, and wide-clefted palates. All waited patiently with their parents while we raced through the list using broken Spanish.

The following day we were back to the second floor of Miguel H. Alcivar Hospital prepping for surgery. Two sparse ORs housed our three surgical teams. The equipment was minimal—never using two towels when one would do, tying sutures carefully to preserve the remnants. However, we provided solid repairs with expediency. The textbook figures quickly came to life with new robust techniques from the local surgeons and other members of the team. And when the repair was complete, we’d extubate and carry the child back to the cots in the Post Anesthesia Care Unit where the parents were waiting with a nervous excitement.

The cases went by quickly, as did the days and, eventually, the week. On the final afternoon we gathered the supplies and said goodbye to the patients recouping on the third floor. Each kid with a cleft palate, lip, scarred palate, or burn gave our group another reason to return.

I returned home from a week in Ecuador with new techniques and a new appreciation for the specialty. The procedures and experience provided by the course. One participant remarked that she would have never had the courage to ask for what she needed to support her career without the skills and backing of the group leaders and participants. Overall, the one most valued aspect for the participants was a safe place to explore their own self-knowledge and areas for improvements, as well as form bonds with each other. As women are still in the minority in our specialty, many do not have structures in their home locations that provide a place to discuss and explore solutions to many personal and professional issues. This program provided that structure for the group members and allowed them to expand those opportunities to others around them. All have indicated their desire to aid the mentoring of the next group, as well as continue to informally meet together.

We are seeking funding to expand the pilot program for the coming year for 20 new participants. The addition of a professional leadership coach and consultant to the program will fortify the skills and techniques offered to the participants. As the face-to-face sessions were valued most highly by the group, despite the personal effort and cost incurred, two in-person sessions are being planned. The kick-off meeting is scheduled for Saturday, September 17, immediately before the AAO-HNSF 2016 Annual Meeting & OTO EXPO® in San Diego, and the second face-to-face session will occur during the AAO-HNS/F 2017 Leadership Forum & BOG Spring Meeting in Alexandria, VA. Please contact WIO at wio@entnet.org for more information and/or to apply for one of the highly desired slots.
Thanks to State Trackers

With most state legislatures adjourned for the year, the AAO-HNS sincerely thanks its State Trackers who helped make 2016 another successful year. Despite their full workloads and family obligations, these physician-leaders took action and volunteered their time to closely monitor and report on legislative activity in their statehouses.

The efforts of the AAO-HNS State Trackers cannot be praised enough, as this legislative session was quite active. Many states considered legislation that would inappropriately expand the scope of practice of various professionals, including audiologists, speech-language pathologists, physician assistants, naturopaths, and hearing aid dispensers. With the dedication of the State Trackers, quick and coordinated actions were successful in keeping the most intrusive of these measures from being enacted.

Identify your state’s Tracker(s) below. If you are interested in joining this “boots on the ground” effort, please contact the AAO-HNS Legislative Advocacy team at govtaffairs@entnet.org for more information.

“In addition to the AAO-HNS Members listed, some states are also represented by state/local OTO society staff/lobbyists. The Academy appreciates their efforts as well.”

AAO-HNS Historical Library opens

The unveiling of the new AAO-HNS Historical Library occurred on Saturday, March 19, 2016, during the Leadership Forum & BOG Spring Meeting. The library, located on the fifth floor of the Academy headquarters, has nearly 700 historical documents related to the field of otolaryngology, including books, oral histories, drawings, pictures, and medical devices.

Information for patients

In 2012 the American Board of Internal Medicine Foundation launched Choosing Wisely® with a goal of advancing a national dialogue on avoiding wasteful or unnecessary medical tests, treatments, and procedures.

Choosing Wisely centers around conversations between providers and patients informed by the evidence-based recommendations. You can access the AAO-HNS Choosing Wisely List of 10 Things Providers and Patients Should Question at www.entnet.org/ChoosingWisely.

Don’t routinely use perioperative antibiotics for elective tonsillectomy in children.

Oral antibiotics may have significant adverse effects and do not provide documented benefit after tonsillectomy. Avoiding the use of perioperative antibiotics can reduce the spread of antibiotic resistance and reduce risk of perioperative infections.

A related patient information sheet that you can clip, copy, and share with your patients is on page 12.

WHAT ARE TONSILS AND ADENOIDs?
Tonsils and adenoids are the body’s first line of defense as part of the immune system. They sample bacteria and viruses that enter the body through the mouth or nose, but they sometimes become infected. At times, they become more of a liability than an asset and may even cause airway obstruction or repeated bacterial infections. Your ear, nose, and throat (ENT) specialist can suggest the best treatment options.

ENLARGED TONSILS AND/OR ADENOIDs AND THEIR SYMPTOMs
If your or your child’s adenoids are enlarged, it may be hard to breathe through the nose. If the tonsils and adenoids are enlarged, breathing during sleep may be disturbed. Other signs of adenoid and/or tonsil enlargement are:

- Breathing through the mouth instead of the nose most of the time
- Nose sounds blocked when the person speaks
- Chronic runny nose
- Noisy breathing during the day
- Recurrent ear infections
- Snoring at night
- Restlessness during sleep, pauses in breathing for a few seconds at night (may indicate sleep apnea)

HOW ARE TONSIL AND ADENOID DISEASES TREATED?
Bacterial infections of the tonsils, especially those caused by streptococcus, are first treated with antibiotics. Removal of the tonsils (tonsillectomy) and/or adenoids (adenoidectomy) may be recommend ed if there are recurrent infections despite antibiotic therapy, and/or difficulty breathing due to enlarged tonsils and/or adenoids. Such obstruction to breathing causes snoring and disturbed sleep that leads to daytime sleepiness, and may even cause behavioral or school performance problems in some children. Chronic infections of the adenoids can affect other areas such as the eustachian tube, the passage between the back of the nose and the inside of the ear. This can lead to frequent ear infections and buildup of fluid in the middle ear that may cause temporary hearing loss. Studies also find that removal of the adenoids may help some children with chronic earaches accompanied by fluid in the middle ear (otitis media with effusion).

In adults, the possibility of cancer or a tumor may be another reason for removing the tonsils and adenoids. In some patients, especially those with infectious mononucleosis, severe enlargement may obstruct the airway. For those patients, treatment with steroids (e.g., prednisone) is sometimes helpful.

REASSEUR YOUR CHILD THAT THE OPERATION DOES NOT REMOVE ANY IMPORTANT PARTS OF THE BODY, AND THAT HE OR SHE WILL NOT LOOK ANY DIFFERENT AFTERWARD.

TALK TO YOUR CHILD ABOUT HIS OR HER FEELINGS AND PROVIDE STRONG REASSURANCE AND SUPPORT.

ENCOURAGE THE IDEA THAT THE PROCEDURE WILL MAKE HIM OR HER HEALTHIER.

BE WITH YOUR CHILD AS MUCH AS POSSIBLE BEFORE AND AFTER THE SURGERY.

TELL HIM OR HER TO EXPECT A SORE THROAT AFTER SURGERY, AND THAT MEDICINES WILL BE USED TO HELP THE SORENESS.

WHEN SHOULD I SEE A DOCTOR?
You should see your doctor when you or your child experiences the common symptoms of infected or enlarged tonsils or adenoids.

YOUR PHYSICIAN WILL ASK ABOUT PROBLEMS OF THE EAR, NOSE, AND THROAT AND EXAMINE THE HEAD AND NECK. HE OR SHE MAY USE A SMALL MIRROR OR A FLEXIBLE LIGHTED INSTRUMENT TO SEE THESE AREAS.

WHAT AFFECTS TONSILS AND ADENOIDs?
The two most common problems affecting the tonsils and adenoids are recurrent infections of the nose and throat, and significant enlargement that causes nasal obstruction and/or breathing, swallowing, and sleep problems.

Abscesses around the tonsils, chronic tonsillitis, and infections of small pockets within the tonsils that produce foul-smelling white deposits can also affect the tonsils and adenoids, making them sore and swollen. Cancers of the tonsil, while uncommon, require early diagnosis and aggressive treatment.

WHEN SHOULD I SEE A DOCTOR?
You should see your doctor when you or your child experiences the common symptoms of infected or enlarged tonsils or adenoids.

YOUR PHYSICIAN WILL ASK ABOUT PROBLEMS OF THE EAR, NOSE, AND THROAT AND EXAMINE THE HEAD AND NECK. HE OR SHE MAY USE A SMALL MIRROR OR A FLEXIBLE LIGHTED INSTRUMENT TO SEE THESE AREAS.

OTHER METHODS USED TO CHECK TONSILS AND ADENOIDs ARE:
- Medical history
- Physical examination
- Throat cultures/strep tests are helpful in determining infections in the throat
- X-rays are helpful in determining the size and shape of the adenoids
- Blood tests are helpful in diagnosing infections such as mononucleosis
- Sleep study, or polysomnogram, is helpful in determining whether sleep disturbance is occurring because of large tonsils and adenoids.

TONSILLITIS AND ITS SYMPTOMs
Tonsillitis is an infection of the tonsils. One sign is swelling of the tonsils. Other symptoms are:

- Redder than normal tonsils
- A white or yellow coating on the tonsils
- A slight voice change due to swelling
- Sore throat, sometimes accompanied by ear pain
- Uncomfortable or painful swallowing
- Swollen lymph nodes (glands) in the neck
- Fever
- Bad breath

ABOUT THE AAO-HNS
The American Academy of Otolaryngology—Head and Neck Surgery (www.entnet.org), one of the oldest medical associations in the nation, represents about 12,000 physicians and allied health professionals who specialize in the diagnosis and treatment of disorders of the ears, nose, throat, and related structures of the head and neck. The Academy serves its members by facilitating the advancement of the science and art of medicine related to otolaryngology and by representing the specialty in governmental and socioeconomic issues. The AAO-HNS Foundation works to advance the art, science, and ethical practice of otolaryngology-head and neck surgery through education, research, and lifelong learning. The organization’s vision: “Empowering otolaryngologist-head and neck surgeons to deliver the best patient care.”

AMERICAN ACADEMY OF OTOLARYNGOLOGY–HEAD AND NECK SURGERY
What’s Going On with AOA?

$99 Membership
New members can join AOA for a full year for just $99! Visit AOAnow.org/join to take advantage of this limited campaign.

Hearing Health Campaign
Build your referral base and educate referring physicians and local PCPs. Learn more and purchase your kit at AOAnow.org/TheLink.

AOA-34
Sept. 7-10
Palmer House Hilton
Chicago
Help your manager prepare for the upcoming year with the AOA-34 Annual Educational Conference. Learn more at AOAnow.org/AOA34.

Is Your Manager Certified?
Ensure that your practice’s leader is competent in ENT practice management. See if your manager is certified at AOAnow.org/COPM.

H. BRYAN NEEL III, MD, PHD
DISTINGUISHED RESEARCH LECTURE

The H. Bryan Neel III, MD, PhD Distinguished Research Lecture, funded by the Neel family and friends, was established to disseminate information on new developments in biomedical science to the otolaryngologic community.

September 18, 2016, 2:15 PM, Ballroom 6A

NIDCR: Advancing Health Through Research and Innovation
Martha J. Somerman, DDS, PHD

Martha J. Somerman, DDS, PhD, is the director of the National Institute of Dental and Craniofacial Research (NIDCR), National Institutes of Health. She also is chief of the Laboratory of Oral Connective Tissue Biology at the National Institute of Arthritis and Musculoskeletal and Skin Diseases. The NIDCR mission is to improve dental, oral, and craniofacial health through research, research training, and dissemination of health information. The NIDCR vision is that these activities will result in NIDCR being recognized as the catalyst of change in transforming how oral healthcare is delivered.

Prior to becoming NIDCR’s director, Dr. Somerman was dean of the University of Washington School of Dentistry, Seattle, a position she held from 2002 to 2011. Before joining the University of Washington, she was on the faculty of the University of Michigan School of Dentistry, Ann Arbor, from 1991 to 2002, and the University of Maryland from 1984 to 1990. An internationally known researcher and educator, Dr. Somerman’s research has focused on defining the key regulators controlling development, maintenance, and regeneration of dental-oral-craniofacial tissues. She has been a recipient of numerous honors and awards throughout her academic career.

Dr. Somerman holds a DDS from New York University, a certificate in periodontology from Eastman Dental Center, Rochester, NY, and a PhD in pharmacology from the University of Rochester, School of Medicine and Dentistry.

AAO-HNSF/INTERNATIONAL HEARING FOUNDATION/ MICHAEL M. PAPARELLA, MD ENDOWED LECTURE FOR DISTINGUISHED CONTRIBUTIONS IN CLINICAL OTOLOGY

The AAO-HNSF/International Hearing Foundation/Michael M. Paparella, MD Endowed Lecture for Distinguished Contributions in Clinical Otology recognizes outstanding achievements and significant sustained contributions to clinical otology and neurotology. Given biennially since 1992, the award is co-sponsored by the International Hearing Foundation.

September 19, 2016, 10 AM, Ballroom 6A

Human Otopathology: Renaissance or Return to the Dark Ages
Michael J. McKenna, MD

Michael J. McKenna, MD, is professor in otology and laryngology at Harvard Medical School and surgeon at Massachusetts Eye and Ear Infirmary. The focus of his extensive research has been on the pathogenesis of otosclerosis and the development of better forms of treatment. But teaching has been an important part of his work.

As director for the Massachusetts Eye and Ear’s neurootology fellowship program, he is able to combine both aspects of his practice. In addition to advanced training on diagnosis and treatment of diseases that affect the auditory and vestibular systems, facial nerve, temporal bone, lateral skull base and related head and neck structures, Massachusetts Eye and Ear fellows continue their learning as they work with Dr. McKenna in this NIH-funded lab. Dr. McKenna states, “Our laboratory was the first to discover an association between measles virus and otosclerosis.”

Dr. McKenna’s dedication to patient care and research came together in his involvement in the development of Massachusetts Eye and Ear’s Auditory Brainstem Implant (ABI) Program and its new ABI research facility.

Dr. McKenna received his medical degree from the University of Southern California, School of Medicine, Los Angeles, in 1982. After an otology fellowship at the House Ear Institute, in 1984 he took a residency at Harvard Medical School and Massachusetts Eye and Ear in otolaryngology followed by clinical fellowship there in otology and neurotology.

His honors include the 1980 Alpha Omega Alpha; 1990 The Fisons Travel Award; 2003 William Montgomery Award for Excellence in Teaching; and 2009 Presidential Citation, American Otological Society.

For detailed scheduling information, visit www.entnet.org/annual_meeting.
LEGENDS IN OTOLARYNGOLOGY LECTURE

The AAO-HNSF Legends of Otolaryngology is a new initiative beginning this fall. The Legends of Otolaryngology is a fundraising program that will honor those individuals who have made significant contributions to the field of otolaryngology-head and neck surgery. Our first Legend is M. Eugene Tardy, Jr., MD. The May issue of the Bulletin focused on this event. Read it here http://bulletin.entnet.org/article/legends-of-otolaryngology.

September 19, 2016, 2:30 PM, Ballroom 6A

The Medical Aspects of the Lewis and Clark Expedition

M. Eugene Tardy, Jr., MD

Eugene Tardy, Jr., MD, will speak on medical aspects of the Lewis and Clark expedition.

For biographical information on Dr. Tardy and his influence, see the November 2015 Bulletin, http://bulletin.entnet.org/article/otolaryngology-legends, or contact bulletin@entnet.org.

Otolaryngology legends

EUGENE N. MYERS, MD INTERNATIONAL LECTURE ON HEAD AND NECK CANCER

Established in 1991, the Eugene N. Myers, MD International Lecture on Head and Neck Cancer was endowed by Leslie Nicholas, MD, in honor of his nephew, Eugene N. Myers, MD, FRCS Edin (Hons), a past president of the AAO-HNS/F. Dr. Myers is known for his dedication to management of head and neck cancer and his interest in international medicine.

September 20, 2016, 9:45 AM, Ballroom 6A

The Changing Role of the Surgeon: Leading the Transformation of Healthcare

Jonathan Irish, MD, MSC, FRCSC

Jonathan Irish, MD, MSc, FRCSC, is chief of the department of surgical oncology at Princess Margaret Hospital/University Health Network (UHN) and Mount Sinai Hospital, Toronto, ON, Canada. He is also full professor of otolaryngology-head and neck surgery at the University of Toronto.

Dr. Irish is on the forefront of quality improvement in cancer surgery. While his clinical focus is head and neck oncology and reconstruction, he is provincial head for the surgical oncology program at Cancer Care Ontario and in that role is responsible for access to care and quality improvement for 13.5 million people in the province of Ontario.

His research interests range from basic science studies in head and neck cancer to patient education intervention trials, to outcomes in head and neck cancers. In his capacity as the Kevin and Sandra Sullivan Chair in Surgical Oncology at the University of Toronto, Dr. Irish leads the UHN’s multidisciplinary program in guided therapeutics using the development of new nanotechnologies for intraoperative imaging and enabling minimal access surgical approaches and ablation. Dr. Irish’s enthusiasm for this project is evident. “We can harness technology to be the new eyes, the new hands to guide the new knife of the modern surgeon,” he said.

Dr. Irish graduated with his MD degree in 1984 from the University of Toronto. He completed residency training at UCLA and at the University of Toronto. He completed his masters of science degree under the supervision of Dr. Alan Bernstein, where he studied molecular biology of head and neck malignancies. He completed the American Head and Neck Society fellowship in head and neck oncology in 1991 and joined the staff of the University Health Network in 1992.

He currently is vice-president of the American Head and Neck Society. He has over 300 peer review publications and over 20 book chapters and has over $2 million in peer review funding for his research through the NCIC and CIHR.
JOHN CONLEY, MD LECTURE ON MEDICAL ETHICS

The John Conley, MD Lecture on Medical Ethics was established in 1987. This lecture is dedicated to the subject of ethics.

September 20, 2016, 2:15 PM, Ballroom 6A

Applying Dr. Conley’s Ethical Standards to The Practice of Contemporary Otolaryngology

G. Richard Holt, MD, MPH, and panelists Susan D. McCammon, MD; Kevin Christopher McMains, MD; and Howard W. Francis, MD

G. Richard Holt, MD, MPH, is an emeritus professor of otolaryngology-head and neck surgery and a faculty member of the Center for Medical Humanities and Ethics at the University of Texas Health Science Center at San Antonio, an adjunct professor in the department of otolaryngology at the University of Missouri, and a faculty scholar in its health ethics center.

Dr. Holt has master’s degrees in public health, engineering, bioethics, and health policy, and a doctorate in bioethics. Because Mae C. Jemison, MD, a former astronaut, engineer, physician, and educator, is this year’s AAO-HNSF Annual Meeting & OTO EXPOSM keynote speaker, an especially relevant biographical entry for Dr. Holt is the fact that he was a 1991 NASA astronaut selection candidate.

He is a past president and former executive vice president of the American Academy of Otolaryngology—Head and Neck Surgery and past president of the American Academy of Facial Plastic and Reconstructive Surgery.

Dr. Holt is a past editor-in-chief of the AAO-HNS journal *Otolaryngology–Head and Neck Surgery*; a past editor-in-chief of *Aviation, Space, and Environmental Medicine*; and is the current editor-in-chief of *Southern Medical Journal*.

While still clinically active at the San Antonio Military Medical Center, he teaches global health and international medicine at the UT School of Public Health, San Antonio, as well as teaching across the country.

Dr. Holt has received the following AAO-HNS awards: Distinguished Service Award; Jerome C. Goldstein, MD Public Service Award; and a Presidential Citation.

Panelists

Susan D. McCammon, MD, is vice-chair, associate professor, and co-director of the Center for Cancers of the Head and Neck, and residency program director in the department of otolaryngology-head and neck surgery at the University of Texas Medical Branch, Galveston. Dr. McCammon is the current chair of the Ethics Committee of the AAO-HNS.

Howard W. Francis, MD, is vice-director and professor of the department of otolaryngology-head and neck surgery, professor of neurosurgery, and professor of radiation oncology and molecular radiation sciences at the Johns Hopkins School of Medicine, Baltimore, MD. He is the recipient of the George T. Nager, MD, Award for Excellence in Teaching.

Kevin Christopher McMains, MD, is adjunct professor in the department of otolaryngology-head and neck surgery at the University of Texas Health Science Center, San Antonio; chief of otolaryngology at Audie Murphy VA Hospital in San Antonio; and associate professor in the department of surgery at the Uniformed Services University of the Health Sciences in Bethesda, MD. Dr. McMains is also past-chair of the ethics committee of the American Rhinologic Society and a past member of the AAO-HNS Ethics Committee.
RegentSM is an ENT qualified clinical data registry that will become the foundation for quality improvement and research, and will support certification and licensure.

For more information about RegentSM please visit www.entnet.org/Regent
The changes to physician reimbursement with the dissolution of the SGR and institution of the Medicare Access and Chip Reauthorization Act (MACRA) and its Merit-Based Incentive Payment System (MIPS), not only have impacted our health policy work at the Academy but have had a profound effect on the focus and strategic work plan of the entire Research, Quality, and Health Policy strategy. While we have been preparing for these changes for the past several years, the future is now and staff and physician leaders involved in Research and Quality are quickly adapting our products and member support activities to this new environment.

At the same time, the specialty has recognized the need for an otolaryngology-specific national data repository for many years, which would serve as the basis for clinical research, define quality for the specialty, address product surveillance, and provide data to inform discussions with major payers. This section of the Bulletin provides updates on some of the ongoing research and quality activities and highlights two of the newer initiatives (RegentSM and quality measurement development). All of these initiatives will assist our Members in navigating this new world.

RegentSM, the first otolaryngology-specific clinical data registry, moved from the business planning stage through Board approval, selection of vendor and vendor contracting, obtaining QCDR and Qualified Registry status from CMS, to the start of a pilot in nine short months. In fact, 21 otolaryngology practices are signed up to participate in the pilot as we go to press. The pilot will run through late summer/early fall. We have ensured representation from all practice types in this pilot from small, one- to two-physician practices to large, academic practices. Gaining QCDR status for the registry has made the difference with reporting to MIPS as outlined in the upcoming Regent article in this issue of the Bulletin.

The Patient Safety Quality Improvement Committee, identified as a model committee, has continued to contribute valuable information to the membership on providing safe care. Their 2016/2017 work plan includes a survey study on concurrent surgeries as well as research and guidance on the issue of in-office sterilization.

Additionally, in supporting the organization’s vision to empower our physicians to provide the best patient care, the Research and Quality staff and physician volunteers identify, promote, and address key research questions and disseminate discoveries for the advancement in the specialty to fundamentally improve patient outcomes. We urge you to closely follow the articles on Guidelines, the Outcomes, Research and Evidence-based Medicine (OREBM) Committee’s new Bulletin column and the Centralized Otolaryngology Research Efforts (CORE program), which all demonstrate the depth and breadth of the initiatives supported by the work of Research and Quality.
In supporting the organization’s vision to empower our physicians to provide the best patient care, the Research and Quality staff and physician volunteers identify, promote, and address key research questions and disseminate discoveries for the advancement in the specialty to fundamentally improve patient outcomes.
Guiding the specialty

CORE grants nurture research, career development

The Centralized Otolaryngology Research Efforts (CORE) grants program plays a critical role in advancing the field of otolaryngology by providing support to research projects, research training, and career development. CORE aims to: 1.) unify the research application and review process for the specialty; 2.) encourage young investigators to pursue research in otolaryngology; and 3.) serve as an interim step that may ultimately channel efforts for important NIH funding opportunities.

The CORE grant program societies, foundations, sponsors, and partners have awarded more than $10 million since the program’s inception in 1985. In conjunction with the American Academy of Otolaryngology—Head and Neck Surgery Foundation (AAO-HNSF), societies, foundations, and sponsors are involved in funding one- to two-year nonrenewable grants ranging from $5,000 to $70,000. The leadership of each participating subspecialty society is ultimately responsible for determining who is selected to receive funding each year. The scores and critiques provided by the CORE Study Section are simply recommendations to help in the decision process. However, the recipients of the grants sponsored by the Alcon Foundation and Oticon Foundation are determined by the AAO-HNSF leadership.

This year the CORE Study Section reviewed 163 applications requesting $2.5 million in research funding. The 2016 CORE Study Section Subcommittees included: Head and Neck Surgery, chaired by Cherie-Ann O. Nathan, MD; Otology, chaired by Oliver F. Adunka, MD; and General Otolaryngology, chaired by Rodney J. Schlosser, MD.

The 2016 CORE leadership (including the boards and councils of all participating societies) has approved a portfolio of 29 grants totaling $495,195.

Congratulations to the 2016 CORE grantees

**AAFPRS Research Scholar Award**

No meritorious applications received.
The AAO-HNSF Clinical Practice Guideline (CPG) and Clinical Consensus Statement (CCS) program continues to thrive. We’ve completed several five-year CPG updates, created several new products, released the eagerly anticipated CCS manual, and welcomed a few new methodologists.

**Five-year updates**
- CPG Otitis Media with Effusion (published February 2016)
- CPG Cerumen Impaction (under journal review)
- CPG Benign Paroxysmal Positional Vertigo (under journal review)
- CPG Hoarseness (Dysphonia) (in process)

**New products**
- CCS Septoplasty with or without Inferior Turbinoplasty (published November 2015)
- CPG Rhinoplasty (in process)
- Evaluation of the Neck Mass in Adults (in process)

We are pleased to see a continued, high-level of interest in the guidelines. Citations for the guideline products now exceed 3,500.

Richard M. Rosenfeld, MD, MPH, and Seth R. Schwartz, MD, MPH, have been busy training additional Members to become guideline methodologists. Our current methodologists in training include Stacey L. Ishman, MD, MPH; David E. Tunkel, MD; and Lisa E. Ishii, MD, MHS. Sujana S. Chandrasekhar, MD, is also a contributing methodologist, however, her 2014-2015 AAO-HNS president-elect and AAO-HNS 2015-2016 president leadership positions have placed a temporary hold on her engagement with the program. We look forward to welcoming her back into the fold this fall.

The Guideline Task Force continues to meet in both the spring and fall to review new guideline and CCS topics. The current queue includes five-year updates for “Tonsillectomy in Children,” “Polysomnography for Sleep Disordered Breathing prior to Tonsillectomy in Children,” and “Sudden Hearing Loss.” New guidelines are scheduled for the “Surgical Management of Rhinosinusitis, Meniere’s Disease, and Epistaxis.”

To help educate Members about the clinical practice guidelines, 22 CME activities and nine American Board of Otolaryngology Self-Assessment Modules/Performance Improvement Modules have been linked to the pertinent guideline webpages.
As announced previously, the AAO-HNSF’s otolaryngology-specific clinical data registry, RegentSM, has been approved as a Qualified Clinical Data Registry (QCDR) by the Centers for Medicare & Medicaid Services (CMS). Regent is a Member-only benefit and is the first and only such registry in the field of otolaryngology-head and neck surgery. Expected to be available later this summer, Regent will allow participants to report on quality measures for federal and private programs. It will become the foundation for quality improvement and research, define quality for the specialty, and assist Members in meeting requirements for certification and licensure.

A QCDR is a CMS-approved entity that collects clinical data to foster improvement in the quality of care furnished to patients. The QCDR designation is very important as it will provide more seamless reporting by Members to the CMS Physician Quality Reporting System (PQRS) in 2016 and will address new reporting requirements under the Merit-based Incentive Payment System (MIPS). Achieving QCDR status is also important for a number of reasons:

- Patient care is improved as Members engage with their own performance data in Regent and track to national benchmarks.
- Members will track their progress to more meaningful measures as the QCDR designation affords the AAO-HNSF the opportunity to create up to 30 otolaryngology head and neck surgery-related measures for quality reporting and quality improvement.

The AAO-HNSF is moving forward with development of performance measures to address the depth and breadth of otolaryngology-head and neck surgery as discussed later in this article.

- It’s physician-friendly. With little data entry burden to physicians and staff, patient data will be extracted and incorporated into Regent from a practice’s electronic health record system (EHR), practice management system, or administrative data system.

In the future, we anticipate that Regent will assist in the support of maintenance of certification and licensure (MOC/MOL) by our Members with the provision of data to the American Board of Otolaryngology (ABOto) and state licensing boards. Additionally, in coming years, Regent will be able to facilitate post-market surveillance for medical devices.

**How Regent extracts data**

Regent extracts data directly from the practice EHR utilizing the technology of FIGmd, AAO-HNSF’s vendor partner. FIGmd installs the Registry Practice Connector (RPC), an application used to access, query, and transfer data from your practice’s data source to the servers supporting Regent. It may be installed on either your practice’s EHR database server or on a computer that has access to your EHR database (or a current copy of the database). The RPC uses a read-only account to directly access your EHR database and the connection sessions can only be initiated from the practice (and never Regent). The RPC allows Regent a great deal of flexibility in mapping data elements required by the registry and little to no work effort on the...
part of your practice.

Patient/encounter-related clinical data is then uploaded to the HIPAA-compliant Regent data cloud where Private Health Information (PHI) data is separated and securely stored in complete compliance with HIPAA laws and regulations until re-identification is needed for quality submissions to CMS. All data extraction and upload activity is fully encrypted and in compliance with HIPAA.

Once installed, your practice will be able to access your own interactive executive dashboard, which will give you and your practice the ability to query performance data, and see performance across different measures for multiple locations and providers. Participating practices can only see their own individual patient-level performance data, which are benchmarked against aggregated data of other Regent participants. Regent is currently in the pilot testing phase with participating practices and is expected to fully launch later this summer.

New measures developed for Regent
It is critically important that the AAO-HNSF and the specialty societies define quality care for the depth and breadth of the specialty. In
In September, CAC Members will convene at the AAO-HNSF Annual Meeting & OTO EXPO™ in San Diego to discuss measure development priorities and commence the important work of developing meaningful performance measures for each otolaryngology specialty.

**Regent measures for PQRS reporting in 2016**

To enable Members to meet the requirements for successful PQRS reporting through a QCDR, the Foundation is pleased to offer six newly developed outcome measures addressing primary and secondary post-tonsillectomy hemorrhage in adults and children and resolution of otitis media with effusion in adults and children. Physicians using Regent to complete PQRS reporting are required to report two outcome measures. In the event that two outcome measures are not available or applicable, EPs are permitted to report at least one outcome measure and at least one resource use, efficiency, appropriate use, patient safety, or patient experience of care measure.

Regent contains 42 measures shown in the table below.

The AAO-HNSF is constantly looking to the future to ensure Regent addresses not only measures and reporting needs, but that future phases of the registry address research, Maintenance of Certification and licensure requirements, quality improvement, and product surveillance. We welcome you to visit www.entnet.org/Regent to sign up to participate in Regent and to follow Regent developments. We also invite your thoughts and questions. To contact us, send an email to regent@entnet.org. If you are planning on attending the AAO-HNSF Annual Meeting and OTO EXPO™ in San Diego, please stop by the Regent booth.

Value-Based Head and Neck Cancer Care

presented by
The University of Texas MD Anderson Cancer Center
November 3-4, 2016

UT MD Anderson Cancer Center
1515 Holcombe Blvd.
Houston, Texas

Value-Based Head and Neck Cancer Care is a conference for multidisciplinary clinicians and researchers dedicated to improving the value and quality of head and neck cancer care.

CALL FOR ABSTRACTS:
Abstracts will be chosen for podium or poster presentations.
Please submit no later than August 12, 2016 by emailing VHNCC@mdanderson.org

For more information visit the website below.
Website: http://www.mdanderson.org/conferences
Email: register@mdanderson.org
Phone: 713-792-2223
AN INVITATION FROM THE CHAIRS
We have radically redesigned the program this year by creating topic-focused tracks—whether you are interested primarily in rhinoplasty, facelift, eyelid surgery, the aging face, non-surgical aesthetics, we have created useful programs that allow attendees to maximize their educational time. There are comprehensive sessions on non-invasive techniques, emerging technologies, reconstruction, business and practice management, and office-staff training.

We have gathered many new speakers, some world-wide experts; we have also included some of our talented but less frequent speakers. We have worked tirelessly to structure a beneficial program that is all-inclusive and maximizes the use of time. Whether or not you’ve attended an AAFPRS Annual Fall Meeting, this year will set the new standard for meetings.

We hope to see you in Nashville -- at the Music City Center -- a perfect venue for what promises to be an unforgettable educational experience.

---

• New speakers, new ideas, new design
• Three days of rhinoplasty
• Three days of surgical facial rejuvenation
• One day of non-invasive and new technology

• Three days of reconstructive surgery
• Three days of business and practice management
• Three days of office staff program
• Three days of exhibition with nearly 100 companies

An Advanced Otolaryngology Program for Residents and Fellows: Delivering Best-in-Class Patient Care in Real World Private Practice

A Week in New York, Seven Seminars

ENT and Allergy Associates (ENTA) – the largest ear, nose, throat, allergy and audiology specialty practice in the nation—would like to share some of its best thinking and insights on how to deliver the FINEST QUALITY medical care possible and succeed in the private practice of otolaryngology, and we’re looking for the most qualified candidates.

If you’re interested in learning real world, market tested tools and techniques from clinical experts and seasoned professionals, join us for a week in New York. We will be holding seven practicums, taking place over four days (Mon-Thurs), covering critically important areas including Office based Otolaryngology; EHR/IT; Billing/Coding; Compliance; Marketing/Practice Building; Healthcare Analytics and Overall Strategy.

And we are providing each participant with a $2500 stipend.

Only 10 slots are available, and the program will begin in Fall 2016 and run until Spring 2017.

If you’d like to apply, please contact ENTA’s Chief Executive Officer, Robert Glazer, at rglazer@entandallergy.com or call him at (914) 333-5809.

For more information on the practice, please visit us at entandallergy.com.
The Charleston Course at the Beach!
6th Annual Otolaryngology Literature Update
Medical University of South Carolina
August 5 - 7, 2016 | Kiawah Island Golf Resort, SC

How does a busy clinician stay current in our rapidly expanding specialty?
Our 6th Annual Literature Update Course is designed to help:
- Expert critical assessments of over 100 of the past year’s most relevant, current evidence-based publications
- Lectures and discussions that will evaluate best practices and strategies for how to translate the evidence into practice

Our faculty members will cover the entire specialty in 19 lectures over 3 half days with emphasis on the “pearls” important to your practice. We hope you will join us in a beautiful location along the South Carolina coast this August!

Paul R. Lambert, M.D.
Paul R. Lambert, M.D., Professor & Chair

University of Missouri
Department of Otolaryngology—Head and Neck Surgery

Seeks clinicians, teachers, and researchers who are personable, energetic and innovative to join a rapidly growing and collaborative group of physicians. Faculty opportunities at all academic levels (Assistant/Associate Professor or Professor or Assistant/Associate Professor or Professor of Clinical Otolaryngology) are available in General Otolaryngology with an interest/experience or fellowship training in Laryngology.

Title, track, and salary are commensurate with experience.
- Competitive production incentive
- Established basic and translational research program focusing on voice and swallow disorders
- New outpatient clinic with state-of-the-art equipment and ancillary services
- Well established and expanding hospital system
- Live and work in Columbia, ranked by Money magazine and Outside magazine as one of the best cities in the U.S.

Otolaryngology – Head & Neck Surgery
Contact: 843-876-0943 • Email: taylorj@musc.edu
Website: ENT.musc.edu

Mount Sinai / Neurotologist
The Mount Sinai Health System Department of Otolaryngology—Head and Neck Surgery is seeking applications for an Otolaryngologist at the Ear Institute. The Institute represents one of the largest academic otologic/neurotologic practices in the country. The Mount Sinai Health System is the largest health system in New York and is composed of the Mount Sinai Hospital, New York Eye and Ear Infirmary, Beth Israel Hospital, and St. Luke’s and Roosevelt Hospitals. The Ear Institute is based at New York Eye and Ear Infirmary.

Located in the heart of Manhattan, the Ear Institute is staffed by full-time and voluntary otologic surgeons and audiologists. The otologist will be working with a multidisciplinary team of physicians to expand skull base surgery, the cochlear implant program, clinical audiology, balance disorders, research and clinical trials. The candidate will work closely and collaborate with the Department of Neurosurgery as an integral part of the skull base surgery program.

The candidate should be fellowship-trained in otology/neurotology and qualified for faculty appointment at the Assistant Professor level. In addition, the candidate should have a medical degree, board certification and be eligible for a New York State medical license.

Mount Sinai / Pediatric Otolaryngologist
The Mount Sinai Health System Department of Otolaryngology—Head and Neck Surgery is seeking a full-time Pediatric Otolaryngologist. The candidate will be working closely and collaboratively with the Department of Otolaryngology—Head and Neck Surgery.

Please send inquiries and curriculum vitae to:
Eric M. Genden, MD
Professor and Chairman
Icahn School of Medicine at Mount Sinai
Department of Otolaryngology—Head and Neck Surgery
One Gustavus L. Levy Place
Box 1189
New York, NY 10029

Phone: 212-241-7008

The Mount Sinai Health System Department of Otolaryngology—Head and Neck Surgery is seeking a full-time Pediatric Otolaryngologist at the Assistant or Associate Professor level. The candidate should have a medical degree, board certification and be eligible for a New York State medical license.

Mount Sinai
The American Board of Otolaryngology (ABOto) invites qualified individuals to apply for the position of full-time Executive Director to serve beginning January 1, 2018, following a six-month overlap period with the current Executive Director.

The Executive Director functions as the chief physician officer of the ABOto and works with the Board of Directors (BOD) and its officers to fulfill the ABOto’s mission. Primary responsibilities include, but are not limited to, oversight of office operations, finances, the certification process, Maintenance of Certification, and implementation of strategies and policies developed by the BOD.

A successful candidate must be an ABOto Diplomate in good standing with senior-level administrative experience including fiscal management, organizational administration, and graduate medical education. Candidates must possess leadership abilities, and excellent communication and interpersonal skills. An academic background and experience with the ABOto are preferable.

Interested candidates should send (1) a statement of intent briefly describing why you are interested in the position, and (2) a current CV, to the attention of Dr. Ron Cannon, ABOto President and Chair of the Search Committee, c/o of the American Board of Otolaryngology, 5615 Kirby Drive, suite 600, Houston, TX 77005. Confidentiality will be maintained throughout the process.

The deadline for application receipt is August 15, 2016, and the interview and selection process will occur during the Fall and Winter of 2016-17.

The American Board of Otolaryngology is an equal opportunity employer.
The Ohio State University  
Department of Otolaryngology – Head and Neck Surgery
